Section 15(b) of the Consumer Product Safety Act (15 U.S.C. 2064(b)) requires every manufacturer of a consumer product distributed in commerce, and every distributor and retailer of such product, who obtains information which reasonably supports the conclusion that such product contains a defect which could create a substantial product hazard, to immediately inform the Commission of such defect, unless such manufacturer, distributor, or retailer has actual knowledge that the Commission has been adequately informed of such defect. Failure to furnish information required by section 15(b) is unlawful under section 19(a)(4) of the act (15 U.S.C. 2068(a)(4)) and may subject a person who so fails to civil and/or criminal penalties.

To implement section 15(b) of the act, the Commission, on February 19, 1974, published regulations (16 CFR Part 1115) in the FEDERAL REGISTER (39 FR 6061), effective March 21, 1974, setting forth the time, manner, and content of notifications necessary to adequately inform the Commission of consumer product defects which could create a substantial risk of injury. The preamble of this Part 1115 indicates that the notification requirements under section 15(b) of the act are applicable to products subject to regulation under authority of the acts transferred to the Commission by section 30 of the Consumer Product Safety Act (15 U.S.C. 2079). These transferred acts include the Federal Hazardous Substances Act (15 U.S.C. 1261 et seq.), the Poison Prevention Packaging Act of 1970 (15 U.S.C. 1471 et seq.), the Flammable Fabrics Act (15 U.S.C. 1191 et seq.), and the Refrigerator Safety Act (15 U.S.C. 1211 et seq.). The aforementioned transferred acts have been brought under the notification requirements of section 15(b) of the Consumer Product Safety Act because, as stated in the preamble to Part 1115: "Upon considering the numerous possibilities of risk to the consuming public by products falling within the authority of these acts, the Commission finds under section 30(d) of the [Consumer Product Safety] Act that such risks can neither be eliminated nor reduced to a sufficient extent in a timely fashion unless the Commission is notified under section 15(b) of the act. This finding by the Commission is based on the fact that none of the provisions of the transferred acts require notification to be made to the Commission upon the obtaining of information which reasonably supports the existence of a substantial product hazard. The Commission has determined this type of notification to be essential for the purpose of protecting the consuming public against unreasonable risks of injury associated with consumer products * * *"

Therefore, the Commission has determined that notifications must be made for vinyl chloride-containing products irrespective of the fact that such products are subject to regulation under the Federal Hazardous Substances Act. This determination, however, does not mean that such products will necessarily be regulated under the Consumer Product Safety Act. Since a notification under section 15(b) does not signify automatic regulation of the product under the Consumer Product Safety Act, the Commission intends to regulate vinyl chloride-containing products under provisions of the Federal Hazardous Substances Act.

Additionally, the Commission notes that manufacturers of vinyl chloride-containing consumer products in aerosol form must provide the information specified below even though the particular product may not have been distributed in commerce after May 14, 1973 (the date of establishment of the Consumer Product Safety Commission). As stated in the preamble to 16 CFR Part 1115, manufacturers who obtain information after May 14, 1973, that one of their products contains a defect which could create a substantial product hazard, are required to comply with the notification requirements of section 15(b) of the act even though the product was distributed in commerce prior to May 14, 1973.

V 39 91 MAY 9 74 XUM

The determination that self-pressurized consumer products containing vinyl chloride contain a defect which could create a substantial product hazard is based on recent information on the possible toxicity of vinyl chloride monomer as a propellant or ingredient in the propellant-solvent system of self-pressurized consumer products. The grounds for this determination are as follows:

(1) Human data showing production of angiosarcomas in certain individuals who have worked in plants manufacturing polyvinyl chloride polymers and/or vinyl chloride monomer; and

(2) Animal data showing production of various tumors, including angiosarcomas, in rats exposed to inhalation of vinyl chloride monomer (Professor Cesare Maltoni, Instituto di Oncologica, Bologna, Italy).

These data are contained in the transcript of an "Informal Fact Finding Hearing on Possible Hazards of Vinyl Chloride Manufacture and Use", U.S. Department of Labor, Occupational Safety and Health Administration, February 15, 1974. A copy of this document is available for public inspection at the Office of the Secretary, Consumer Product Safety Commission, 1750 K Street NW., Washington, D.C. 20207.

The Commission has received a petition from the Health Research Group "to immediately prohibit the continued use of vinyl chloride as a propellant for aerosolized consumer products and to remove all products containing vinyl chloride as a propellant from the market because there is substantial evidence that vinyl chloride is carcinogenic." A notice proposing a ban under the Federal Hazardous Substances Act will be published in the near future and will include a copy of the petition.

Accordingly, the Consumer Product Safety Commission, pursuant to section 6(c) of the Consumer Product Safety Act (15 U.S.C. 2055(c)), hereby informs manufacturers of self-pressurized consumer products containing vinyl chloride monomer as a propellant or ingredient in their propellant-solvent system that the Commission considers such products to contain a defect which could create a substantial product hazard.

Although 16 CFR 1115.7(a) sets forth 23 specific items of information to be submitted in writing to the Commission, this notice, pursuant to § 1115.7(d), requires that information submitted to the Commission in this instance include only the 7 items listed below. Additional information may, of course, also be submitted. Therefore, manufacturers of consumer products (as that term is defined in section 3(a)(1) of the Consumer Product Safety Act (15 U.S.C. 2052(a)(1)) in self-pressurized form that contain vinyl chloride monomer as a propellant or ingredient in their propellant-solvent system are required, under section 15(b) of the Consumer Product Safety Act (15 U.S.C. 2064(b)) and regulations issued thereunder (16 CFR Part 1115), to provide the following information in writing to Dr. Alan Ehrlich, Office of Standards Coordination and Appraisal, Consumer Product Safety Commission, Washington, D.C. 20207 (301 496–7698) on or before May 20, 1974.

(1) Identification of specific self-pressurized products by type and brand, in which vinyl chloride monomer is now, or has been, used as a propellant or ingredient of the propellant-solvent system;

(2) Production and sales history including inventory turnover rates through the entire chain of distribution of vinyl chloride monomer as a propellant or ingredient of the propellant-solvent system of self-pressurized products;

(3) Identifying features, such as use of package designs or production codes that will identify the self-pressurized products containing vinyl chloride monomer as a propellant or ingredient in the propellant-solvent system;

(4) Patterns of consumer usage for self-pressurized products containing vinyl chloride monomer as a propellant or ingredient in the propellant-solvent system, including frequency and duration of exposure, and place and purpose of use;

(5) If available, acute and chronic toxicity data relative to vinyl chloride and products containing vinyl chloride;

(6) If available, human experience data relative to vinyl chloride and products containing vinyl chloride, including adverse effects and associated disease entities believed to be relevant;

(7) If available, special studies, such as metabolic, mutagenic and teratologic studies involving vinyl chloride.

In accordance with 16 CFR 1115.9, information submitted to the Commission in response to this notice shall be signed either by the chief executive officer of the notifying company or by the person to whom the responsibility has been delegated in writing.

Dated: May 6, 1974.

SADYE E. DUNN,
Secretary, Consumer Product Safety Commission.

Agreement No. T-2947, between the Maryland Port Administration (MPA), and Maher Terminals, Inc. (Maher), provides for a month-to-month lease of certain facilities at Dundalk, Maryland, including 50,000 square feet of floor space in Shed 2, 25,000 square feet of floor space in Shed 6, and approximately 4 acres of paved outside storage area. Maher shall have exclusive control over the scheduling of vessels at Berth 2, with MPA retaining secondary rights to the use of the berth. As an incident to Maher's lease of space at Shed 6, MPA will grant requests by Maher to berth vessels of the Baltic Shipping Co. (Baltic) at Berth 6, provided such berth is not already occupied or programmed for occupation during the period requested by Maher. The space in Shed 6 is to be used exclusively for Baltic cargo only, unless MPA grants its approval for some other use. Maher will publish its own tariff and collect for its own account all terminal charges incurred by vessels at Berth 2, with the exception that charges collected on any vessel assigned to the berth by MPA shall accrue to MPA unless such cargo is placed within Maher's leased premises. Whenever, a Maher vessel is assigned a berth other than Berth 2 and there is no other vessel at Berth 2, Maher will collect all amounts due under MPA's tariff. Whenever a Maher vessel is assigned a berth other than Berth 2 and there is another Maher vessel berthed at Berth 2, Maher will collect wharfage due under MPA's tariff. In both instances, for Maher to receive the tariff charges, the cargo discharged from the vessel must be placed within Maher's leased facility or loaded on the vessel from Maher's premises. As rental, Maher will pay MPA a monthly fee of $18,750.00 plus all taxes and assessments arising out of its operations as well as all taxes on improvements placed on premises by Maher.

NATIONAL GAS SURVEY TECHNICAL ADVISORY COMMITTEE TASK FORCES

Determination and Certification Regarding Renewal

MAY 8, 1974.

The Chairman of the Federal Power Commission has determined that renewal of the terms of the National Gas Survey's three Distribution-Technical Advisory Committee Task Forces (Facilities, Finance, and Regulation and Legislation), from and after May 25, 1974, to and including a date not later than December 31, 1974, is necessary in the public interest in connection with the performance of duties imposed by law upon the Commission.

This notice is published pursuant to Commission General Order No. 464, issued December 19, 1972, paragraph (4)(e) and authorities referred to therein, 48 FPC 1484, 1490. See also Office of Management and Budget, Advisory Committee Management, 39 FR 12389.

By order issued December 21, 1971, 46 FPC 1352, the Commission established the task forces to be subordinate organizationally to their respective parent committees. The purpose of these task forces, as indicated in the Commission's order of April 6, 1971, 45 FPC 530, is to perform work assigned to them by their respective advisory committees. As renewed, the subject task forces would function as set forth in those orders for the additional period described above. Reports of the technical advisory task forces covering their work performed to date have been submitted to the Commission through their respective technical advisory committees. It is contemplated that the task force and committee reports, along with the Commission report, will be published prior to the end of the calendar year 1974, and the subject task forces are proposed not to be extended thereafter.

The exigencies of the national energy crisis and long-term energy policy strategy has been more fully delineated since commencement of the National Gas Survey in 1971. Accordingly, it is clear that certain phases of the present gas shortage originally studied by the Survey's task forces require further investigation and analysis. The Office of Management and Budget, Committee of Management Secretariat, has determined that renewal of the subject task forces as set forth above is consistent with the requirements of the Federal Advisory Act, 86 Stat. 770.

Renewal of these task forces will be reflected in an appropriate Commission order to be issued after May 23, 1974.

JOHN N. NASSIKAS,
Chairman.

[Docket No. RP74–77]

COLORADO INTERSTATE GAS CO.

Proposed Tariff Rate Changes

MAY 1, 1974.

Colorado Interstate Gas Company, a division of Colorado Interstate Corporation (CIG), tendered for filing, on March 29, 1974, proposed changes in its FPC Gas Tariff, Second Revised Volume No. 1[1] to become effective May 1, 1974. CIG states that the proposed changes would increase revenues from jurisdictional sales and service by $5.3 million over those rates presently being collected subject to refund in Docket No. RP73–93 and by $10.3 million over the proposed settlement rates in that proceeding, inclusive of appropriate PGA adjustments and the March 1, 1974 rate increase attributable to the transfer of CIG's producing properties to a subsidiary in Docket No. RP74–68. The proposed increase is based on a test year of the twelve-month period ending December 31, 1973, as adjusted.

The filing was noticed on April 3, 1974, with petitions to intervene due on or before April 19, 1974. Numerous petitions to intervene have been filed.[2]

Our review of the filing and the issues raised therein indicates that the proposed rates have not been shown to be just and reasonable and may be unjust, unreasonable, unduly discriminatory or preferential or otherwise unlawful. We shall therefore order a suspension of rates proposed herein for the full statutory period and establish hearing procedures.

Additionally, we have previously stated[3] that conjunctive billing procedures may be inconsistent with our policies in determining appropriate rates. Accordingly, we believe that the issue of CIG's conjunctive billing procedures should be fully explored and developed within the evidentiary hearing herein ordered. To permit full discussion of these issues, we shall provide dates for the service of evidence by all parties on this question as well as all other issues in this docket.

In this filing CIG uses the unmodified "Seaboard" method of cost classification, allocation and rate design. In light of Commission Opinion No. 671, issued October 31, 1973, in "United Gas Pipeline Company," Docket No. RP72–75, wherein the Commission adopted two part rates based upon the classification of 75 percent of fixed costs to commodity and 25 percent of fixed costs to demand, the burden shall be on CIG to justify any commodity rate levels reflecting inclusion of less than 75 percent of "Seaboard" fixed costs.

We note that CIG has included in the tariff sheets proposed herein costs associated with uncertificated facilities.[4] CIG requests waiver of § 154.63(e)(2)(ii) of the regulations to permit such costs to be included in the subject rate filing. CIG states that such facilities will be constructed and in service by the time the revised rates proposed in the filing become effective, subject to refund after a 5 month suspension.

For good cause shown, we shall grant waiver of § 154.63(e)(2)(ii) of the regulations and permit the costs associated with the uncertificated facilities to be included in the filing and to become effective, subject to refund, after suspension; *Provided, however,* That should such facilities not be certificated and placed in service on the date the proposed rates take effect, subject to refund, CIG shall file substitute tariff sheets including rates which reflect only those facilities which have been certificated.

Additionally, we note that CIG has included certain items in its filing which are the subject of litigation in Docket No. RP73–93. These items include the price differential between the P–1 and G–1 rate schedules and payments for coal options and water rights. We shall permit such items to be reflected in the proposed tariff sheets, subject to the disposition of those items in the decision in Docket No. RP73–93.

The Commission finds.

(1) The proposed changes in CIG's FPC Gas Tariff should be accepted for filing, suspended for five months, and the use thereof deferred until October 1, 1974.

(2) It is necessary and proper in the public interest and to aid in the enforcement of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the rates and charges in CIG's FPC Gas Tariff, as proposed to be amended in this docket.

(3) Good cause exists to permit the intervention of the above mentioned petitioners.

(4) Good cause exists to grant waiver of § 154.63(e)(2)(ii) to the regulations as hereinafter ordered and conditioned.

The Commission orders.

(A) Pursuant to the Authority of the Natural Gas Act, particularly sections 4 and 5 thereof, the Commission's rules of practice and procedure, and the regulations under the Natural Gas Act (18 CFR Ch. I), a public hearing shall be held on September 24, 1974, for the purpose of cross-examination concerning the lawfulness and reasonableness of the rates and charges in CIG's FPC Gas Tariff, as proposed to be amended herein.

(B) Within thirty days of the issuance of this order, CIG shall file its direct testimony and exhibits on the conjunctive billing issue. The Commission Staff shall file its evidence on all issues on or before August 13, 1974. Any intervenor evidence on all issues shall be filed on or before August 27, 1974. Any rebuttal evidence by CIG shall be filed on or before September 10, 1974.

(C) A Presiding Administrative Law Judge to be designated by the Chief Administrative Law Judge for that purpose (See Delegation of Authority, 18 CFR 3.5(d)), shall preside at the hearing in this proceeding, shall prescribe relevant procedural matters not herein provided, and shall control this proceeding in accordance with the policies expressed in § 2.59 of the Commissions' rules of practice and procedure.

(D) Pending hearing and a decision thereon, CIG's proposed revised tariff sheets are accepted for filing and suspended for the full statutory period of five months and the use thereof deferred until October 1, 1974, and until such time as they are made effective in the manner provided in the Natural Gas Act: *Provided, however,* That if certificate approval has not been granted in Docket Nos. CP74–199 and CP74–209 by October 1, 1974, CIG shall file substitute tariff sheets reflecting exclusion of costs associated with the facilities which are the subject of the aforementioned dockets.

(E) Waiver of § 154.63(e)(2)(ii) is granted, subject to the condition set forth in Ordering Paragraph D above.

(F) The above mentioned petitioners are hereby permitted to intervene in this proceeding, subject to the rules and regulations of the Commission: *Provided, however,* That the participation of such intervenors shall be limited to matters affecting the rights and interests specifically set forth in the respective petitions to intervene; *And provided, further,* That the admission of such intervenors shall not be construed as recognition that they or any of them might be aggrieved because of any order or orders issued by the Commission in this proceeding.

(G) Nothing contained herein shall be construed as limiting the rights of parties to this proceeding regarding the convening of conferences or offers of settlement pursuant to § 1.18 of the Commission's rules of practice and procedure.

(H) The Secretary shall cause prompt publication of this order in the FEDERAL REGISTER.

By the Commission.

Lawrenceburg states that these sheets, designated Substitute Fifth Revised Sheet No. 3–A superseding Substitute Fourth Revised Sheet No. 3–A and Substitute Fifth Revised Sheet No. 18–B superseding Substitute Fourth Revised Sheet No. 18–B, are being filed to replace prior sheets, filed on April 15, 1974, which were incorrectly identified.

NORTHERN PUMP CO.

Notice of Petition for Special Relief

MAY 1, 1974.

Take notice that on April 18, 1974, Northern Pump Company, (Petitioner), 1915 57th Avenue North, Minneapolis, Minnesota 55430, filed a petition for special relief in Docket No. RI74–214, pursuant to Order No. 481 and § 2.76. Petitioner requests special relief from the area rate prescribed in Opinion No. 586 with respect to sales of natural gas to Cities Service Gas Company from its Kraus Gas Unit in the Hugoton-Field, Finney County, Kansas. Petitioner seeks a rate of 30.0 cents per Mcf.

Petitioner proposes to rework the well and estimates that such reworking will permit it to sell additional reserves of approximately 250,000 Mcf over the next 10–12 years. Petitioner further states that because of reduced pressures, limited producing capabilities, and increasing water production, further production from the Unit is uneconomical at the existing rate of 13.2 cents per Mcf, and premature abandonment will result unless the relief requested is granted.

Any person desiring to be heard or to make any protest with reference to said petition should on or before May 24, 1974, file with the Federal Power Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's rules of practice and procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any party wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's rules.

GENERAL SERVICES ADMINISTRATION

[Federal Property Management Regs.; Temporary Reg. E-31]

ACQUISITION OF MOTOR VEHICLES

Revised Policies and Procedures

1. *Purpose.* This regulation provides revised policies and procedures to be followed in purchasing sedans, station wagons, and light trucks covered by Federal Standard Number 122 and Interim Federal Standards Numbers 00292 and 00307; and leasing motor vehicles in excess of the maximum order limitation ($500) of Federal Supply Schedule, Industrial Group 751—Motor Vehicle Rental Without Driver.

2. *Effective date.* This regulation is effective upon publication in the Federal Register.

3. *Expiration date.* This regulation expires September 30, 1974, unless sooner revised or superseded.

4. *Applicability.* The provisions of this regulation apply to all executive agencies. Other Federal agencies are encouraged to conform so that maximum benefits may be realized.

5. *Background.* To further the President's program for achieving reduction in the consumption of the Nation's energy by Government agencies, policy guidance has been developed and published in Federal Management Circular (FMC) 74-1, Federal energy conservation. In consonance with the general policy contained therein, this regulation specifically restricts acquisition of motor vehicles by executive agencies to subcompact or compact vehicles to the extent practicable in consideration of the accomplishment of agencies' missions. In addition, to achieve more efficient management of Government-operated vehicles, the use of a single agency as the primary source for determining the availability of motor vehicles will result in greater control over the type and number of vehicles leased and in the reduction of fuel consumption.

6. *Acquisition of motor vehicles—a. Purchase of sedans, station wagons, and light trucks.* In furtherance of the objective stated in paragraph 5, agencies shall purchase sedans, station wagons, and light trucks equipped with engines and accessories which will achieve the maximum reduction in energy consumption commensurate with optimum achievement of their missions and functions. Agencies shall follow the policy and procedures set forth below when purchasing sedans, station wagons, and light trucks.

(1) *Sedans and station wagons.* With respect to the purchase of sedans and station wagons, agencies shall acquire only those vehicles as defined in Federal Standard Number 122 as follows: Sedans, type I, class A, subcompact, or class B, compact; station wagons, type I, subcompact/compact passenger vehicles. Requisitions for new passenger vehicles submitted to the General Services Administration for other than those specified above shall contain a certification by the agency head or his designee that the larger vehicle requisitioned is essential to the agencys' mission. The certification may be placed on the GSA Form 1781, Motor Vehicle Requisition—Delivery Order—Invoice; military interdepartmental purchase request (MIPR); other acceptable requisitioning document; or on an appropriate attachment thereto. Agency passenger vehicle requisitions for other than type I vehicles omitting such certification shall be satisfied with the appropriate type I vehicle at the discretion of GSA.

(2) *Light trucks.* Requirements for light trucks shall be requisitioned in accordance with the provisions of this regulation, FPMR 101-26.501, and interim Federal Standards Numbers 00292 (Tables I through VIII) and 00307 (Tables I through XI) as applicable. The agency head or his designee shall certify on the GSA Form 1781 or other appropriate document that each light truck requisitioned represents the minimum capacity/performance vehicle which will satisfy the requirements in consideration of overall safety, economy, and efficiency.

(3) *Additional systems and equipment.* The procurement of additional systems and equipment for new sedans, station wagons, and light trucks under the provisions of FPMR 101-26.501(a) shall be accomplished only after the essentiality of the additional systems and equipment has been considered in terms of the primary objective of reduced fuel consumption as opposed to the end use of the vehicle.

b. Leasing of motor vehicles. All requirements for leased vehicles exceeding the maximum order limitation ($500) of Federal Supply Schedule, Industrial Group 751—Motor Vehicle Rental Without Driver, shall be submitted to the General Services Administration for appropriate action as shown below. The request shall include full justification as to the need for such leased vehicles and a certification that other means of transportation are not available or not suitable. Further, the type of vehicle requested shall be limited to type 1A or 1B unless certified by the agency head or his designee that the larger vehicle is essential to the agency's mission. The anticipated duration of the lease shall also be included in the request.

(1) Agencies establishing new requirements for leased vehicles, nationwide, shall submit such requirements to the General Services Administration (FZ), Washington, D.C. 20406, for a determination whether the requirements can be satisfied with vehicles from the Interagency Motor Pool System. The Office of Transportation and Public Utilities (FZ) will notify agencies and the appropriate GSA regional offices regarding decisions on vehicle allocations or, where motor pool vehicles are not available, advise agencies to proceed with leasing action.

(2) For other than national requirements, agencies shall first submit such requirements to the Regional Director, Motor Equipment Division, Federal Supply Service, of the supporting GSA region, for a determination whether the requirements can be satisfied with vehicles from the Interagency Motor Pool System. If motor pool vehicles are available, the agency will be so notified by the regional office. If motor pool vehicles are not available, GSA will return the request to the agency for leasing action.

(3) Leasing of medium and heavy trucks for periods of less than 90 days and all charter services are exempted from the provisions of this regulation.

7. *Assistance.* The General Services Administration will assist agencies in the acquisition of motor vehicles.

a. With respect to the purchase of sedans, station wagons, and light trucks, information pertaining to related specifications and standards may be obtained from the Automotive Division (FMA), telephone (703) 557-7800. Inquiries concerning motor vehicle procurement matters may be obtained from the Automotive Division (FPM), telephone (703) 557-8300. The mail address for these organizations is General Services Administration ((FMA) or (FPM), as applicable), Washington, DC 20406.

b. With respect to leasing, agencies may obtain assistance from the Regional Director, Procurement Division, Federal Supply Service, of the supporting GSA region.

8. *Effect on other issuances.* This regulation supplements the policy in FPMR 101-26.501 as it applies to the purchase of motor vehicles. Further, FPMR Temporary Regulations E-26, Leasing of motor vehicles, dated November 28, 1973; and E-28, Acquisition of sedans, station wagons, and light trucks, dated January 28, 1974, are canceled.

9. *Comments or suggestions.* Agency views concerning the effect or impact of this regulation on agency operations or programs should be submitted to General Services Administration (FF), Washington, DC 20406, no later than June 1, 1974, for consideration and possible incorporation into the permanent regulation.

Member's lock box in Chicago as the original and definitive copy of that item.

The proposed amendments will become effective on or before June 10, 1974, or upon such earlier date as the Commission may allow unless the Commission shall disapprove the change in whole or in part as being inconsistent with the public interest or the protection of investors.

ASTRON FUND, INC., ET AL.

Notice of Application for Order of Exemption

MAY 2, 1974.

Notice is hereby given that Astron Fund, Inc. ("Astron"), a Washington corporation registered as an open-end diversified management investment company under the Investment Company Act of 1940 ("Act"); and Bondstock Corporation ("Bondstock"), 1100 One Washington Plaza, Tacoma, Washington 98402, a Delaware Corporation registered as an open-end, diversified management investment company under the Act, and Frank Russell Co., Inc., ("Russell"), a broker-dealer registered under the Securities Exchange Act of 1934 and the principal underwriter for Astron and Bondstock (Astron, Bondstock, and Russell are collectively referred to as "Applicants") have filed an application pursuant to section 6(c) of the Act for an order of the Commission exempting Applicants from the provisions of section 22(d) of the Act to permit Bondstock to offer shareholders of Astron the right to invest the proceeds of certain liquidating distributions in shares of Bondstock at net asset value without the payment of any sales or service charges. All interested persons are referred to the application on file with the Commission for a statement of the representations contained therein which are summarized below.

The Application represents that at a meeting of Astron's Board of Directors held on January 22, 1974, its Board determined to liquidate and dissolve Astron. Pursuant to that determination, preliminary proxy soliciting materials, seeking shareholder approval of a Plan of Liquidation and Dissolution ("Plan of Liquidation") at a special meeting of shareholders scheduled for April 26, 1974 have been filed with the Commission for mailing to shareholders. The application represents that upon adoption by Astron shareholders of the Plan of Liquidation, there will be an initial liquidating distribution amounting to approximately 90 percent of Astron's net assets. The remaining assets of Astron will be distributed when Astron's Board concludes that it is no longer reasonable to pursue certain claims Astron may have against a former officer and others.

Section 22(d) of the Act, in pertinent part, prohibits the sale of any redeemable security issued by a registered investment company at a price other than the current public offering price described in the prospectus. Applicants request an exemption from section 22(d) of the Act, to the extent necessary, to permit Bondstock to offer its shares at the net asset value thereof to Astron shareholders investing the proceeds of Astron's liquidating distributions.

Applicants represent that by investing in shares of Astron, Astron's shareholders have evidenced an intent to pursue their investment goals by investing in a mutual fund whose principal investment objective is growth of capital and which is managed by Russell. Applicants state that the investment objectives, the investment policies and restrictions, the tax status, the management and the management fee of Astron and Bondstock are substantially the same; and state that the expense ratio of Bondstock has been substantially lower in recent years than the expense ratio of Astron. Applicants state that they believe that it is in the interest of Astron's shareholders who wish to do so to permit them to invest, without the payment of any additional sales or service charges, the proceeds of the liquidating distributions in shares of Bondstock at the net asset value.

Section 6(c) of the Act provides that the Commission, by order upon application, may conditionally or unconditionally exempt any persons or transactions from any provisions or provision of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policies and provisions of the Act.

Notice is further given that any interested person may, not later than May 24, 1974, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request, and the issues, if any, of fact or law proposed to be controverted, or he may request that he be notified if the Commission should order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon Applicants at the address stated above. Proof of such service (by affidavit, or in the case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0-5 of the rules and regulations promulgated under the Act, an order disposing of the application herein will be issued by the Commission as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing or advice as to whether a hearing is ordered will receive notice of further developments in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management Regulation, pursuant to delegated authority.

[SEAL] GEORGE A. FITZSIMMONS,
Secretary.

E. I. DU PONT DE NEMOURS AND CO.

Notice of Filing of Application

MAY 2, 1974.

Notice is hereby given that E. I. du Pont de Nemours and Company ("Applicant"), 1007 Market Street, Wilmington, Delaware 19898, a Delaware corporation, has filed an application pursuant to section 17(b) of the Investment Company Act of 1940 ("Act") for an order exempting the proposed sale by Applicant to Block Engineering, Inc. ("Block"), a Delaware corporation, of 540,000 shares of the common stock of Block, representing Applicant's entire ownership in Block, for $675,000 in cash and a six-year 6½ percent subordinated note in the amount of $675,000. All interested persons are referred to the application on file with the Commission for a full statement of the representations therein, which are summarized below.

Christiana Securities Company ("Christiana"), a registered closed-end investment company, owns approximately 28.1 percent of the outstanding common stock of Applicant, which in turn owns approximately 33.6 percent of the outstanding common stock of Block. Under section 2(a)(9) of the Act, both Applicant and Block are presumed to be controlled by Christiana and under section 2(a)(3) of the Act, both Applicant and Block are also affiliated persons of Christiana.

Applicant states that its initial investment in Block in 1962 was part of Applicant's then active program to support technologically oriented embryonic companies through minority investments and was undertaken without contemplation of maintaining its minority equity position indefinitely. During the intervening years, investment in Block has not resulted in any particularly close compatability to Applicant's endeavors. In these circumstances, Applicant has, from time to time in recent years, considered the possibility of disposing of its minority interest in Block.

It was against this background that Applicant considered Block's offer, made in March 1973, to acquire Applicant's holding in Block substantially on the above terms. Applicant had not received any indication, despite various recent efforts in that direction, that another purchaser could be found who would acquire the holding on comparable terms. High and low bid prices on Block common stock during the period of negotiations (approximately March 1973 through August 1973) were 3¾ and 2⅛, respectively. The provisions of the proposed sale were negotiated at arm's length and Applicant believes that the terms negotiated with Block appropriately reflect the market conditions existing during the period of negotiations, and that these terms are fair and reasonable to all parties concerned.

At Block's request, the agreement between Applicant and Block provides that Block's purchase of Applicant's interest in Block be conditioned on the prior or simultaneous consummation of the following transaction between Block and United States Trust Company of New York, which represents a group of private investors (hereinafter referred to collectively as "U.S. Trust"): U.S. Trust will exchange the 8½ percent subordinated notes due May 31, 1975, issued to U.S. Trust by Block in 1969 in the aggregate principal amount of $500,000 ($450,000 of which remain outstanding), and the 7¼ percent subordinated convertible notes due November 30, 1979, issued to U.S. Trust by Block in 1969 in the aggregate principal amount of $1,000,000 convertible into Block common stock at the rate of $16⅔ per share, as follows: (1) $1,305,000 of subordinated notes for 216,000 shares of Block common stock, at $6.04 per share and (2) $145,000 of subordinated notes for cash in such amount together with accrued or deferred interest thereon. The application states that Block negotiated separately and independently on the one hand with Applicant and on the other hand with U.S. Trust.

From the time of their initial investment in Block in 1969, the U.S. Trust investors have desired an equity investment in Block, rather than a debt investment; the $16⅔ per share conversion price contained in the convertible debt of Block held by these investors was negotiated in the light of the bid price of Block common stock during the fall of 1969, which ranged from $16¾ to $11¾ during the period September through December 1969, and which was $11¾ in mid-December 1969 when the convertible debt was issued. Such price levels then afforded some support for the belief that conversion of the debt at $16⅔ a share might be advantageous in the foreseeable future.

Since then, conversion at that price would not have been advantageous to the investors; instead, they have been faced with the prospect of having their investment in Block essentially tied up until the debt is repaid and of receiving their return thereon in the form of current interest income rather than capital gains. In these circumstances, the investors were attracted to an opportunity to convert all of their debt holdings in Block to equity at a per share conversion price which would close a substantial majority of the gap between the $16⅔ per share price and current market levels—recognizing that Block could not have been expected to agree to terms which would close that gap entirely.

Section 17(a) of the Act prohibits an affiliated person of a registered investment company from selling to such company or any company controlled by such registered investment company any security or other property, with certain exceptions, unless the Commission finds, upon application under section 17(b) of the Act, that the terms of the proposed transaction are reasonable and fair and do not involve overreaching on the part of any person concerned and that the proposed transaction is consistent with the policy of the registered investment company and the general purposes of the Act.

Notice is further given that any interested person may, not later than May 28, 1974, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission should order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon Applicant at the address stated above. Proof of such service (by affidavit or in case of an attorney-at-law by certificate) shall be filed contemporaneously with the request. As provided by Rule 0-5 of the rules and regulations promulgated under the Act, an order disposing of the application herein will be issued as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing, or advice as to whether a hearing is ordered, will receive notice of further developments in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management Regulation, pursuant to delegated authority.

Secretary.

INDIANA & MICHIGAN ELECTRIC CO. AND AMERICAN ELECTRIC POWER COMPANY, INC.

Notice of Proposed Transactions

MAY 2, 1974.

Notice is hereby given that American Electric Power Company, Inc. ("AEP"), 2 Broadway, New York, New York 10004, a registered holding company, and Indiana & Michigan Electric Company ("I&M"), 2101 Spy Run Avenue, Fort Wayne, Indiana 46801, its electric utility subsidiary company, have filed an application-declaration with this Commission pursuant to the Public Utility Holding Company Act of 1935 ("Act"), designating sections 6(b) and 12 thereof and Rule 50 promulgated thereunder as applicable to the proposed transactions. All interested persons are referred to the application-declaration, which is summarized below, for a complete statement of the proposed transactions.

I&M proposes to issue and sell, subject to the competitive bidding requirements of Rule 50 under the Act, $70,000,000 aggregate principal amount of First Mortgage Bonds, to mature in not less than 5 and not more than 30 years. The interest rate (which will be expressed in a multiple of ⅛ of 1 percent) and the price (which will be not less than 100 percent, unless I&M shall authorize a lower percentage not less than 99 percent, and shall not exceed 102.75 percent) will be determined by competitive bidding. The terms of the Bonds preclude I&M from redeeming any such Bonds prior to June 1, 1979 if such redemption is for the purpose of refunding such Bond with proceeds of funds borrowed at a lower effective interest cost.

I&M also proposes to issue and sell, subject to the competitive bidding requirements of Rule 50 under the Act, 300,000 shares of a new series of its cumulative preferred stock, par value $100 per share. The dividend rate (which will be a multiple of .04 of 1 percent) and the price to be paid by I&M (which shall not be less than $100 per share or more than $102.75 per share) will be determined by competitive bidding. Prior to June 1, 1979, none of the shares of the preferred stock may be redeemed if such redemption is for the purpose of refunding such share, directly or indirectly, through the incurring of debt or the issuance of stock ranking equally with or prior to the preferred stock at an interest or dividend cost less than the dividend cost to I&M of the preferred stock.

V 39 91 MAY 9 74 XUM

AEP proposes to make a cash capital contribution of $10,000,000 to I&M. Neither the Bonds nor the preferred stock will be issued and sold unless I&M shall have received prior to such sale and subsequent to March 31, 1974 cash capital contributions from AEP which aggregate $30,000,000. The making of $20,000,000 of such cash capital contributions by AEP has been previously authorized on June 29, 1973 (Holding Company Act Release No. 18013).

The proceeds realized from the sale of the Bonds and cumulative preferred stock will be applied within 90 days after such sale to the payment of a like principal amount of unsecured short-term indebtedness of I&M consisting of notes and demand notes payable to banks and commercial paper. At March 31, 1974, $149,506,000 principal amount of such unsecured short-term debt was outstanding and, it is anticipated that at the time of the sale of the Bonds and cumulative preferred stock, following receipt of the cash capital contributions, approximately $100,000,000 principal amount of such unsecured short-term debt will be outstanding. The proceeds from the cash capital contribution or contributions received by I&M from AEP will be applied, together with other funds available to I&M, to the payment of unsecured short-term indebtedness of I&M.

Expenses of I&M in connection with the proposed transactions will be filed by amendment. The proposed transactions are subject to the jurisdiction of the Public Service Commission of Indiana and the Michigan Public Service Commission, and no other state commission and no federal commission, other than this Commission, has jurisdiction over the proposed transactions.

Notice is further given that any interested person may, not later than May 29, 1974, request in writing that a hearing be held on such matter, stating the nature of his interest, the reasons for such request, and the issues of fact or law raised by said application-declaration which he desires to controvert; or he may request that he be notified if the Commission should order a hearing thereon. Any such request should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request should be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon the applicant-declarant at the above stated address, and proof of service (by affidavit or, in case of an attorney-at-law, by certificate) should be filed with the request. At any time after said date, the application-declaration, as filed or as it may be amended, may be granted and permitted to become effective as provided in Rule 23 of the general rules and regulation promulgated under the Act, or the Commission may grant exemption from such rules as provided in Rules 20(a) and 100 thereof or take such other action as it may deem appropriate.

Persons who request a hearing or advice as to whether a hearing is ordered will receive notice of further developments in this matter, including the date of the hearing (if ordered) and any postponements thereof.

PETROLEUM ENERGY INVESTORS, LTD.

Order Temporarily Suspending Exemption, Statement of Reasons Therefor, and Opportunity for Hearing

MAY 2, 1974.

I. Miller Management Services, Inc. ("MMS"), a California corporation organized December 7, 1970, with offices located at 2483 East Bayshore, Suite 208, Palo Alto, California, filed with the Commission on July 18, 1973, a Form 1-A Notification with attached exhibits, including an offering circular, relating to an offering of 100 limited partnership units at an offering price of $5,000 per unit in Petroleum Energy Investors, Ltd. ("Petroleum"), a limited partnership to be formed to acquire, explore and develop oil and gas properties in Oklahoma, Texas and other states. MMS was to act as general partner for Petroleum. The offering has not commenced.

II. The Commission, on the basis of information reported by the staff, has reason to believe that:

A. The notification and offering circular contain untrue statements of material facts and omit to state material facts necessary to make the statements made, in the light of the circumstances under which they were made, not misleading, particularly with respect to:

1. The failure to disclose all promoters and affiliates;

2. The failure to disclose the sale of unregistered securities;

3. The failure to disclose a temporary restraining order and subsequent preliminary injunction against the issuer and its president, Follis O. Miller; and

4. The failure to disclose that the issuer had been placed in receivership.

B. The terms and conditions of Regulation A have not been met in the following respects:

No Regulation A exemption is available to MMS under the provisions of Rule 252(c)(4) and Rule 252(d)(2) in that MMS, Follis O. Miller and Sant Pallan, an affiliate of MMS, are subject to a decree of a court of competent jurisdiction of the State of California preliminarily enjoining and restraining such persons from engaging in any violations of the California Securities Act.

C. The proposed offering, if made, would be in violation of Section 17 of the Securities Act of 1933, as amended.

III. It appearing to the Commission that it is in the public interest and for the protection of investors that the exemption of the issuer under Regulation A be temporarily suspended,

It is ordered, pursuant to Rule 261(a) of the general rules and regulations under the Securities Act of 1933, as amended, that the exemption of the issuer under Regulation A be, and hereby is, temporarily suspended;

It is further ordered, Pursuant to Rule 7 of the Commission's rules of practice, that the issuer file an answer to the allegations contained in this order within thirty days of the entry thereof;

Notice is hereby given that any person having any interest in the matter may file with the Secretary of the Commission a written request for a hearing within thirty days after the entry of this order; that within twenty days after receipt of such request the Commission will, or at any time upon its own motion may, set the matter down for a hearing at a place to be designated by the Commission for the purpose of determining whether this order of suspension should be vacated or made permanent, without prejudice, however, to the consideration and presentation of additional matters at the hearing; and that notice of the time and place for the said hearing will be promptly given by the Commission. If no hearing is requested and none is ordered by the Commission, the order shall become permanent on the thirtieth day after its entry and shall remain in effect unless it is modified or vacated by the Commission.

VENTUREVEST CORP.

Notice of Filing of Application

MAY 2, 1974.

Notice is hereby given that Venturevest Corp., ("Applicant"), 1665 Route #10, Morris Plains, New Jersey 07950, registered as a closed-end, non-diversified management investment company under the Investment Company Act of 1940 ("Act"), has filed an application pursuant to section 8(f) of the Act for an order of the Commission declaring that Applicant has ceased to be an investment company as defined in the Act. All interested persons are referred to the application on file with the Commission for a statement of the representations set forth therein, which are summarized below.

Applicant was organized as a Delaware corporation on December 16, 1955, under the name American Laundrimation Corp., which name was changed to Laundrimation, Inc. on April 2, 1956. Applicant adopted its present name on January 26, 1970. Applicant represents that it operated as a commercial, non-investment company until May, 1969. Applicant registered under the Act on May 23, 1969.

The application states that on June 14, 1973, the shareholders of Applicant voted to approve the decision of Applicant's board of directors to change the fundamental policy of Applicant to one which would cause it not to be an investment company. Since June 14, 1973, Applicant has not invested in any securities, reinvested in any securities, or, except to the limited extent necessary to dispose of the securities which were owned by Applicant on June 14, 1973, traded in any securities. Further, Applicant has not and does not hold itself out as being engaged primarily in the business of investing, reinvesting or trading in securities, and is not now engaged and does not now propose to engage in the business of investing, reinvesting, owning, holding or trading in securities in such a manner as to cause section 3(a)(3) of the Act to apply to Applicant. Applicant now is engaged in various entrepreneurial activities consistent with its change in fundamental policy, including the development of a bedding product, the patent on which is owned by Applicant and of two other new instructional products, whose copyrights are owned by Applicant and which are to be marketed by Applicant.

Applicant represents that it currently owns no investment securities, U.S. Government securities, or other securities. Applicant retains a contractual right to a percentage of the cash profits, if any, realized upon the sale of certain Achievement Inc. stock by an entity to which Applicant sold said stock. There is, however, no current market for said stock, and the board of directors of Applicant considers this contractual right to be worthless.

Section 8(f) of the Act provides, in pertinent part, that when the Commission, upon application, finds that a registered investment company has ceased to

V39|91 MAY 9 74 XUM

be an investment company, it shall so declare by order, and upon the effectiveness of such order the registration of such company shall cease to be in effect.

Notice is further given that any interested person may, not later than May 28, 1974, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request, and the issues, if any, of fact or of law proposed to be controverted, or such person may request a notification if the Commission should order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon the Applicant at the address stated above. Proof of such service (by affidavit, or in the case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0–5 of the rules and regulations promulgated under the Act, an order disposing of the application herein will be issued as of course following May 28, 1974, unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing or advice as to whether a hearing is ordered will receive notice of further developments in this matter, including the date of the hearing, if ordered, and any postponements thereof.

For the Commission, by the Division of Investment Management Regulation, pursuant to delegated authority.

[Ex Parte No. 305]

NATIONWIDE INCREASE OF TEN PERCENT IN FREIGHT RATES AND CHARGES, 1974

Authority To File

At a general session of the Interstate Commerce Commission, held at its office in Washington, D.C., on the 3d day of May 1974.

It appearing, that, as set forth in some detail in the order herein denying the request for short notice, entered on April 29, 1974, most of the nation's railroads[1] and certain connecting water and motor carriers seek authority to publish a nationwide general increase of 10 percent in freight rates and charges, subject to unidentified exceptions, and subject to a refund rule;

It further appearing, that in the report in Ex Parte No. 295, Increased Freight Rates and Charges, 1973, Nationwide, 344 I.C.C. 589, it was required that in future proposals for general increases by the railroads a showing should be made regarding (1) efforts to update tariffs and (2) efforts to improve service, that while no reference is made to (1) in the petition and accompanying statements, the carriers have been complying with the requirement in the report in Ex Parte No. 295 by filing periodic reports of the progress in tariff updating, and that a showing has been made with respect to the other matter.

It further appearing, that the data accompanying petition shows that the proposed increase would produce additional revenues of $1.5 billion ($505 million in the East, $272 million in the South, and $723 million in the West); and that it would improve the railroads' rate of return from 3.08 to 5.27 percent nationally (from 0.56 to 2.99 in the East, from 5.40 to 7.48 in the South, and from 4.21 to 6.26 in the West);

It further appearing, that, referring to the Commission's reference, in the report in Ex Parte Nos. 265 and 267, Increased Freight Rates 1970 and 1971, 339 I.C.C. 125, 181–182, to a rate of return of 6 percent on net investment and the statement that such a return represents what "the respondents must make every effort to attain if they are to be in a position to provide the improved services which will be needed in the future," the petitioners urge that the proposed 10 percent increases, resulting in a national rate of return of 5.27 percent, would be consistent with that position;

It further appearing, that the petitioners contend that they are in urgent need of additional revenue for necessary maintenance and capital investment to prevent deterioration of the properties used to perform the service and to expand service to meet the demand; that since the filing of the proposed increase in pending Ex Parte No. 303, Increased Freight Rates and Charges, 1974, Nationwide, the price of materials alone has increased by $475 million and other operating expenses by $175 million, and that taxes will increase by $282 million; and that the remaining $568 million to be realized from the proposed increase presumably would be used to improve "the ability of the railroad system to meet the transportation requirement of the country;"

If further appearing, that is consideration of the evidence submitted to show that additional revenue is required to offset inflated prices of materials, to improve maintenance, and to increase net railway operating income to a level indicated by the Commission to be required in the report in Ex Parte Nos. 265 and 267, and especially in view of the need of certain railroads to improve their cash flow within the reasonably near future to continue operations, the railroads should be authorized to file the proposed increase to become effective on not less than 30 days' notice, subject to protests and suspension;

[1] The Long Island Rail Road did not join in the petition.

It further appearing, that as previously indicated, the carriers seek a 10 percent increase in their rates and charges, subject, however, to certain exceptions which they have not identified; that since the filing of the petition, official notice is taken of a news item suggesting that some carriers, in certain instances, do not intend to increase their rates and charges on certain commodities at all, and, some carriers, in other instances, intend to apply an increase of less than 10 percent to certain commodities; and, that in order for the general public to have an overall view of the proposal, the carriers should, upon the filing of the tariffs or schedules implementing the authority herein granted, set forth a complete list of exceptions, if any, to the general proposal, including holddowns, flagouts, and provisions for no increases, and, the special permission order so provides; therefore,

It is ordered, That a proceeding be, and it is hereby, instituted into the revenue needs of the railroads of the United States, and that all common carriers by railroad subject to the Interstate Commerce Act be, and they are hereby made respondents hereto.

It is further ordered, That in publishing the proposed increase in accordance with the special permission authority hereinafter granted, subject to protest and suspension, the schedules shall be published to become effective on June 5, 1974, upon not less than 30 days' notice, and shall include the refund provision prescribed in said permission.

It is further ordered, That protests and verified statements in opposition shall be filed to reach the Commission on or before May 24, 1974 (12 days prior to the published effective date of the proposed schedules), and replies thereto will be due 5 days thereafter, or on May 29, 1974; that the verified statements will be considered as protests and will be made a part of the formal record, along with those filed by the respondents in support of the proposal. All protests, by wire and otherwise, received previously will be considered as such. [Special Permission No. 74-3440]

It is ordered, For good cause shown:

1. All petitioning railroads, and water and motor carriers to the extent they have joint rates with said railroads, and their tariff-publishing agents, be, and they are hereby, authorized to depart from the Commission's tariff-publishing rules to publish and file tariffs, to become effective on June 5, 1974, upon not less than 30 days' notice to the Commission and to the public, providing for increased rates and charges as set forth in the petition.

(a) By publication and filing of a master tariff of increased rates and charges, and supplements thereto, providing increases by means of conversion tables of rates and charges, which shall include, and maintain in effect, a refund provision reading as follows:

> In the event any increases resulting from the application of this tariff exceed the increases subsequently approved or prescribed by the Interstate Commerce Commission, the carriers will refund the difference between the increases resulting from the application thereof and any increases which may subsequently be approved or prescribed by the Interstate Commerce Commission with 4 percent interest.
>
> In the event an increase resulting from the application of this tariff is disapproved by the Commission and no increase is authorized, the carriers will refund the full amount of the increases collected with 4 percent interest.

The master tariff shall bear an expiration date not beyond one year after the effective date, which may not be canceled or extended except upon specific authorization of this Commission, and all relief herein expires with that date. The master tariff must initially contain all provisions for application of the increases (including provisions for no increases, if any) following which (unless suspended) any provisions other than those of a general character may be canceled and transferred to the particular tariffs affected upon a common effective date with appropriate notation to that effect in the master tariff amendment.

The master tariff shall contain provisions stating that the fuel surcharge increases authorized by the Commission, as set forth in a separate table in the master tariff, shall be applied to subjected rates and charges prior to the application of the increases authorized to be filed in Ex Parte No. 305.

(b) By publication and filing of a connecting link supplement to each tariff (to be made subject to the master tariff), connecting such tariffs with the master. Such supplements may be blanket supplements (a common supplement issued to two or more tariffs), provided each copy officially filed is hand marked in the appropriate places as to the supplement number and the I.C.C. number of the tariff it supplements.

(c) By publication and filing of tariffs or amendments to tariffs effective concurrently with the master tariffs and upon the same notice which provide specifically increased rates and charges but which do not result in an increase in charges for transportation and other services greater than those specified in the petition, provided all such publications are identified in the tariffs and made subject to the refund clause worded substantially as in paragraph 1(a) herein.

(d) By publication of provisions in tariffs or amendments thereto subjecting rates and charges therein to the provisions of the master tariff.

(e) By publication and filing of a supplement to Tariff of Surcharges Account Increases in Fuel Costs X-301-C, Traffic Executive Association-Eastern Railroads, I.C.C. No. C-1027, and other agents, providing for the cancellation thereof concurrent with the effective date of the master tariff authorized in paragraph 1(a) herein.

2. (a) The master tariff and supplements thereto, and all other tariffs and amendments to tariffs, that employ the short-form methods authorized herein shall bear the notation:

> Form of publication authorized I.C.C. permission No. 74-3440

(b) Tariffs or amendments to tariffs publishing specifically increased rates or charges hereunder shall bear the notation:

> Publication made in accordance with I.C.C. permission No. 74-3440.

3. Connecting-link supplements authorized herein shall be exempt from the Commission's tariff-publishing rules governing the number of supplements and the volume of supplemental matter permissible.

4. Outstanding orders of the Commission are hereby modified only to the extent necessary to permit the filing of tariff publications containing the proposed increases, and all tariff publications filed are subject to protest and possible suspension or rejection. In that regard, we direct petitioners' attention to our admonitions in prior general increase proceedings concerning maintenance and preservation of existing port relationships. See for example Increased Freight Rates and Charges, 1972, 341, I.C.C. 288, 336, and Increased Freight Rates, 1970 and 1971, 339 I.C.C. 125, 188. Rate increase tables on grain shall progress in one-half cent increments.

It is further ordered, That notice of this order be given by serving a copy thereof on each party to the proceeding in Ex Parte No. 303, to the Governor and public utility regulatory body of each State, the Environmental Protection Agency, the Special Assistant to the President for Consumer Affairs, and by depositing a copy in the Office of the Secretary of the Commission at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register for publication therein.

[Notice No. 36]

MOTOR CARRIER, BROKER, WATER CARRIER, AND FREIGHT FORWARDER APPLICATIONS

MAY 3, 1974.

The following applications (except as otherwise specifically noted, each applicant (on applications filed after March 27, 1972) states that there will be no significant effect on the quality of the human environment resulting from approval of its application), are governed by § 1100.247[1] of the Commission's general rules of practice (49 CFR, as amended), published in the FEDERAL REGISTER issue of April 20, 1966, effective May 20, 1966. These rules provide, among other things, that a protest to the granting of an application must be filed with the Commission within 30 days after date of notice of filing of the application is published in the FEDERAL REGISTER. Failure seasonably to file a protest will be construed as a waiver of opposition and participation in the proceeding. A protest under these rules should comply with section 247(d)(3) of the rules of practice which requires that it set forth specifically the grounds upon which it is made, contain a detailed statement of protestant's interest in the proceeding (including a copy of the specific portions of its authority which protestant believes to be in conflict with that sought in the application, and describing in detail the method—whether by joinder, interline, or other means—by which protestant would use such authority to provide all or part of the service proposed), and shall specify with particularity the facts, matters, and things relied upon, but shall not include issues or allegations phrased generally. Protests not in reasonable compliance with the requirements of the rules may be rejected. The original and one (1) copy of the protest shall be filed with the Commission, and a copy shall be served concurrently upon applicant's representative, or applicant if no representative is named. If the protest includes a request for oral hearing, such requests shall meet the requirements of section 247(d)(4) of the special rules, and shall include the certification required therein.

Section 247(f) of the Commission's rules of practice further provides that each applicant shall, if protests to its application have been filed, and within 60 days of the date of this publication, notify the Commission in writing (1) that it is ready to proceed and prosecute the application, or (2) that it wishes to withdraw the application, failure in which the application will be dismissed by the Commission.

Further processing steps (whether modified procedure, oral hearing, or other procedures) will be determined generally in accordance with the Commission's general policy statement concerning motor carrier licensing procedures, published in the FEDERAL REGISTER issue of May 3, 1966. This assignment will be by Commission order which will be served on each party of record. Broadening amendments will not be accepted after the date of this publication except for good cause shown, and restrictive amendments will not be entertained following publication in the FEDERAL REGISTER of a notice that the proceeding has been assigned for oral hearing.

[1] Copies of Special Rule 247 (as amended) can be obtained by writing to the Secretary, Interstate Commerce Commission, Washington, D.C. 20423.

Title 40—Protection of the Environment

CHAPTER I—ENVIRONMENTAL PROTECTION AGENCY

SUBCHAPTER N—EFFLUENT GUIDELINES AND STANDARDS

PART 419—PETROLEUM REFINING POINT SOURCE CATEGORY

On December 14, 1973 notice was published in the FEDERAL REGISTER (38 FR 34542), that the Environmental Protection Agency (EPA or Agency) was proposing effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources within the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory, and integrated subcategory of the petroleum refining category of point sources.

The purpose of this notice is to establish final effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources in the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory, and integrated subcategory of the petroleum refining category of point sources, by amending 40 CFR Ch. I, Subchapter N, to add a new Part 419. This final rulemaking is promulgated pursuant to sections 301, 304 (b) and (c), 306 (b) and (c) and 307(c) of the Federal Water Pollution Control Act, as amended, (the Act); 33 U.S.C. 1251, 1311, 1314 (b) and (c), 1316 (b) and (c) and 1317(c); 86 Stat. 816 et seq.; Pub. L. 92-500. Regulations regarding cooling water intake structures for all categories of point sources under section 316(b) of the Act will be promulgated in 40 CFR Part 402.

In addition, the EPA is simultaneously proposing a separate provision, which appears in the proposed rules section of the FEDERAL REGISTER, stating the application of the limitations and standards set forth below to users of publicly owned treatment works which are subject to pretreatment standards under section 307(b) of the Act. The basis of that proposed regulation is set forth in the associated notice of proposed rulemaking.

The legal basis, methodology and factual conclusions which support promulgation of this regulation were set forth in substantial detail in the notice of public review procedures published August 6, 1973 (38 FR 21202) and in the notice of proposed rulemaking for the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory, and integrated subcategory. In addition, the regulations as proposed were supported by two other documents: (1) The document entitled "Development Document for Proposed Effluent Limitations Guidelines and New Source Performance Standards for the Petroleum Refining Segment of the Petroleum Refining Point Source Category" (December 1973) and (2) the document entitled "Economic Analysis of Proposed Effluent Guidelines, Petroleum Refining Industry" (September 1973). Both of these documents were made available to the public and circulated to interested persons at approximately the time of publication of the notice of proposed rulemaking.

Interested persons were invited to participate in the rulemaking by submitting written comments within 30 days from the date of publication. Prior public participation in the form of solicited comments and responses from the States, Federal agencies, and other interested parties were described in the preamble to the proposed regulation. The EPA has considered carefully all of the comments received and a discussion of these comments with the Agency's response thereto follows. The regulation as promulgated contains some significant departures from the proposed regulation. The following discussion outlines the reasons why these changes were made and why other suggested changes were not made.

(a) *Summary of major comments.* The following responded to the request for comments which was made in the preamble to the proposed regulation: Interstate Sanitation Commission; Shell Oil Company; Phillips Petroleum Company; Getty Oil Company; Union Oil Company of California; Exxon Company, USA; Larry D. Killion; American Petroleum Industry; Standard Oil Company of Ohio; UOP Process Division; Gulf Oil; City of Buffalo; Mobil Oil Corporation; Macario Independent Refinery; Texaco Incorporated; Standard Oil Company of Indiana; National Wildlife Federation; State of California; County of Erie, NY; State of Alaska; Los Angeles County; Buffalo (N.Y.) Area Chamber of Commerce; State of Colorado; State of Michigan; U.S. Water Resources Council; Sun Oil Company; Department of the Interior; The Honorable Henry P. Smith, III; State of North Carolina.

Each of the comments received was carefully reviewed and analyzed. The following is a summary of the significant comments and EPA's response to those comments.

(1) Clean rainfall limits should be set at the same level as treatment plant effluent to avoid having to treat marginally contaminated runoff.

The handling of storm runoff was reevaluated and the run-off from a refinery was broken down further to consider tankfield runoff, process area runoff and other noncontaminated runoff. This reevaluation also considered the treatment of marginally contaminated runoff. (See "Development Document," Section VII).

As a result of this evaluation a limit of 35 mg/1 TOC and 15 mg/1 oil and grease (both maximums) was set for both tankfield runoff and other uncontaminated runoff. (This is changed from 15 mg/1 of TOC and no visible sheen). The limits for contaminated runoff (process area runoff treated along with other process wastes) should remain the same.

(2) The definition of feedstocks should include imported catalytic cracker feed, reformer feed and petrochemical feeds.

Since these feeds do not receive full processing at the refinery and are free of some contaminants (removed during prior processing), no allocation based on throughput should be given. The additional waste loads caused by the processing required is taken into account by the higher process factor the refinery will receive. (See "Development Document," Section IX).

(3) Once-through cooling water should not be included in a production based allocation. The reasons for this statement and alternate approaches given are as follows:

(a) The March 7, 1973 guidance excluded once-through water from consideration; (b) the low concentrations contained have no environmental impact; (c) analytical techniques do not allow for accurate results at low concentrations; and (d) a separate limit of 5 mg/1 of TOC (net) should be used.

An evaluation of water flow data from over one hundred refineries, both with recycle and once-through cooling water systems, showed that only 25 percent of the total flow from recycle refineries results from cooling tower blowdown. In addition, the once-through refineries showed higher process waste flows than the recycle refineries. Therefore, once-through cooling water is being excluded from the production based allotment and a separate limit of 5 mg/1 of TOC is being set to prevent gross contamination of these waters. (See "Development Document"; section IX; Supplement B, "Refinery Water Use".)

(4) Limits should be based on a monthly average rather than 30 day running average. (Running average—any thirty consecutive days).

The limits are set in terms of a running average to prevent slackening off at the end of any fixed period and therefore guarantee optimum performance at all times.

(5) There isn't enough variability allowed between the daily and monthly limits. Arguments given to justify higher values were as follows:

(a) Data were not random or normally distributed; (b) variability not being met by some refineries using BPCTCA end-of-pipe; and (c) high analytical errors.

The variability factors can not be compared as a ratio of daily and monthly (30 day average) values. Both the daily and 30 day average variabilities were based on the annual average. The daily variability predicts the maximum day over a period of a year and the 30 day average variability predicts the maximum 30 day average in any year.

These variabilities were computed from data taken from several plants (one year's or more data in each case). The variability factors therefore include all of the errors (resulting variability) that result from sampling and analytical technique and accuracy.

The date from the plants analyzed were found to be either normally or log normally distributed.

The fact that certain refineries, which already have the end-of-pipe treatment as defined by BPCTCA, are showing higher variabilities than those of the exemplary plants only points out that BPCTCA as defined should include factors other than end-of-pipe treatment (i.e. good water use practices, good housekeeping, etc.). (See "Development Document," section IX, "Statistical Variability of a Properly Designed and Operated Waste Treatment Plant"; Supplement B, "Variability").

The daily maximum variability was increased to reflect a 99 percent probability of occurrence. This was done to reduce the number of technical violations.

TOC limit should be eliminated and set later as its ratio to BOD5 is determined at each refinery.

The limits set for TOC are necessary because of the many instances when BOD5 COD, or both are not practical limits (as a result of analytical errors, time limitations, etc.). (See "Development Document," section IX; "Procedure for Development of BPCTCA Effluent Limitations").

The ratio of TOC/BOD, proposed at 1.8 was raised to 2.2.

(7) A subcategorization should be made based on the age of the refinery because of non-segregated sewers and the inequitable financial burden.

Those refineries with non-segregated sewers will probably have to either segregate their once-through cooling water or go to recycle cooling. This has already been done by many older refineries and was considered as part of the economic evaluation.

(8) The American Petroleum Institute has proposed a method to further subcategorize the petroleum industry. This approach is based on a mathematical analysis of the 1972 EPA/API Raw Waste Load Survey Data. This analysis (not yet completed) proposes to determine the relative effect of various process types on the total refinery flow.

An intensive investigation of this approach has been carried out. As a result, it was found that both size (feedstock throughput) and process configuration weigh heavily in determining the final flows. Tables have been included in the regulation to allow variation within each subcategory based on both size and process configuration. (See "Development Document," section IV; Supplement B, "Refinery Configuration Analysis").

The size and process factors determined from the above investigation were used to further subcategorize the petroleum industry.

(9) Special consideration should be given for refineries charging California crudes because of the high nitrogen, sulfur and naphthenic acid content.

The heavy (10–20 API gravity) nature of the California crudes requires more intensive processing (cracking, etc.) than lighter grades of crude. From the data available, the process factor (based on severity of operations) adequately accounts for the higher raw waste loads seen in refineries running California crudes. (See "Development Document," Section IV; Supplement B, "California Crudes".)

(10) There is no allowance given in the guidelines for the contaminants present in the intake water (net vs. gross), which are said to be especially significant in once-through cooling water.

The effluent limitations guidelines have generally been developed on a gross or absolute basis. However, the Agency recognizes that in certain instances pollutants will be present in navigable waters which supply a plant's intake water, in significant concentrations, which may not be removed to the levels specified in the guidelines by the application of treatment technology contemplated by BPCTCA.

Accordingly, the Agency is currently developing amendments to its NPDES permit regulations (40 CFR Part 125) which will specify the situations in which the Regional Administrator may allow a credit for such pollutants. The regulations will be proposed for public comment in the near future.

(11) Some correspondents endorsed the proposal made to the Administrator by the Effluent Standards and Water Quality Information Advisory Committee. This proposal is for a significantly different approach to the development of effluent guidelines.

The above-mentioned proposals are under evaluation as a contribution toward future refinements on guidelines for some industries. The Committee has indicated that their proposed methodology could not be developed in sufficient time to be available for the current phase of guideline promulgation. Its present state of development does not provide enough evidence to warrant the Agency's delaying issuance of any standard in hopes that an alternative approach might be preferable.

(12) The BATEA limits were objected to because they are based on pilot plant data.

The Agency recognizes that the technology specified herein as best available technology economically achievable has not been demonstrated in day-to-day operations in this industrial category. However, in determining whether technology has been "demonstrated" for the purposes of standards which must be achieved by 1983, the Agency does not believe that the same high degree of confidence that the technology will work must exist as is the case for 1977 standards. In making the judgment as to whether or not the technology is "available," the Agency examined a wide range of information, including the use of the technology to treat similar wastes in other industrial categories, pilot plant and demonstration projects, and laboratory and other experimental data on various waste treatment processes. Based on such data and information, and the application of the Agency's best judgment, the technology specified herein was determined to constitute the best available technology economically achievable for the petroleum refinery category.

It is recognized that, in some cases, the industry must itself perform some of the pilot plant and other developmental work which will be necessary to bring the technology into full utilization. This does not however, alter the Agency's judgment that the technology is "available," is "economically achievable," and can be brought on line in time to achieve full compliance by 1983, as required by the Act.

(13) The flow basis, based on 97 percent recycle flow, is too restrictive to be met by older refineries with once-through cooling water and does not consider the varying process complexities within subcategories.

The flow basis is not a flow restriction. It was used to determine the expected pounds/day from a refinery with good water use and the specified end-of-pipe treatment scheme. The refinery with once-through cooling water may continue to discharge that water.

The guideline takes into consideration the difference in expected flow caused by varying process complexities by the use of a process factor that varies the limits within each subcategory based on process configuration. (See "Development Document"; Section IX).

(14) EPA failed to adequately consider factors such as raw material used, products produced, processes, and waste water constituents.

The use of the process factors directly considers the processes used. The raw materials used, products produced and the waste water constituents are covered indirectly because each determines or is determined by the process configuration of each refinery. (See "Development Document"; Section IV; Supplement B, "Refinery Configuration Analysis").

(15) No allowances have been made for malfunctions, breakdowns, and upsets of the treatment plant. Since it may take several weeks to recover from a severe upset, a procedure for reporting these circumstances and obtaining a temporary variance is necessary.

The guideline is based on normal operation. Any consideration of other than normal operation will be covered in the NPDES permits.

(16) The COD limits are too low because of test tolerances. EPA analytical methods state minimum reportable concentrations 200 mg/1 in water with 1,000 mg/1 of chloride.

Standard methods tolerance at 150 mg/1 of COD is ±14 mg/1 at 1,000 mg/1 of chloride. There will still be cases where extremely high chloride levels will negate the use of this test and that is one of the reasons for limits being set for three oxygen demanding parameters (BOD5, COD, and TOC).

(17) Data from pilot plant carbon systems indicate removal efficiencies (percent removal) less than those used for BATEA limits. (BOD, COD, oil and grease).

The pilot plant values used are referenced in Table 65 of the Development Document. Concentrations, not removal efficiencies were used to set BOD and oil and grease limits for BATEA.

(18) The oil and grease limits should be raised because the references in the Development Document showed 10 mg/1 attainable from bio-treatment and 7 mg/1 from activated carbon, yet the guideline is based on 5 mg/1.

V 39 I 91
MAY 9 74
XUM

The guideline limit (BPCTCA) is based on neither bio-treatment nor activated carbon, but on a polishing step after bio-treatment (i.e., polishing ponds, filters, etc.) (See "Development Document," sections VII and IX).

(19) Consideration should be given to refineries in northern climates because of the effect of temperature on biological treatment systems.

Of the many refineries currently meeting EPA's guidelines for BOD5, several are located in northern climates (e.g. Billings, Montana; Alma, Michigan). (See supplement B, refinery data).

(20) The Economic Impact Analysis states, "It is not expected that any significant economic impact would result from imposing the 1977 and 1983 effluent limitations." This is not true, especially in the light of the current and future unstable situation of crude oil supply.

An economic impact analysis of pollution controls on the refinery industry completed February, 1974 states "As a result of recent world developments there is a substantial differential between world cartel prices and U.S. domestic oil prices. If this continues, there is reason to suggest that a number of the projected small refinery closures might not occur. Certainly the ability to attract long-term financing for pollution abatement is greatly enhanced by the price differential that exists." (See supplement B, "Impact on Refineries of Pollution Control Regulations", February, 1974).

(21) Oil and grease limits should be based on a maximum effluent concentration of 1 mg/l and should be limited by concentration and not on pounds-production values.

There is neither a demonstrated treatment technology to guarantee 1 mg/l of oil and grease effluent concentration, nor an accepted analytical procedure to measure it.

(22) Effluent limits should be set as lbs/1000 gals of waste water flow based on a specified end-of-pipe treatment and a documented flow for each individual refinery.

This approach does not adequately consider the importance of the in-plant requirements of BPCTCA (good water use, housekeeping, etc.) (See "Development Document", sections VII and IX).

(23) Ammonia levels based on 80 percent removal from the median raw waste load (API separator effluent) and the BPCTCA removal step for ammonia is in-plant in the form of a stripper.

Even though the primary removal of ammonia in a refinery should be done during sour water stripping many refineries have not optimized toward ammonia removal (units designed for sulfide removal). The optimization of stripping for ammonia removal or the installation of two stage strippers is considered BPCTCA. In addition, ammonia will be removed in the treatment plant as it is needed to provide nutrient nitrogen for the biological system. (See "Development Document", section VII).

(24) The economic impact for the removal of chromium and zinc was not considered.

The zinc limit has been deleted as a result of an analysis of the zinc raw waste loads from over one hundred refineries. Only a small percentage of these refineries' raw waste loads exceeded the guideline zinc limit.

A similar analysis showed almost 50 percent of the refineries (using cooling towers, chromium appears in refinery wastes because of its use as a corrosion inhibitor in recycle cooling systems) meeting the total chromium limits with their raw waste. Since the solubility of Cr+3 is less than 0.1 mg/l between pH 6.0 to 9.0, the remaining refineries should meet the guidelines limits by removing the insoluble Cr+3 along with other suspended solids.

The reduction of Cr+6 to Cr+3 occurs naturally in a typical refinery waste because of the presence of reducing agents such as sulfides and sulfites.

The above factors will mean that no additional costs (for removal of chromium) should be involved for the majority of refineries above those required to meet the other parameter limits. (See supplemental B, "Raw Waste Load Survey—Zinc and Chromium").

(25) There is a need to monitor and control all identified pollutants such as TDS, cyanide and various other specific ions, in addition to the eleven parameters already being monitored and controlled.

The parameters limited in the guidelines are those which are fairly common to the industry and for which there is existing technology in use in the industry for their removal. The control and monitoring of any additional parameters might be called for on an individual basis to meet water quality standards.

(26) Promulgation is considered to be appropriate provided it is subject to realistic revision as new data becomes available.

The Act provides for periodic review and revisions as appropriate.

(b) Revision of the proposed regulation prior to promulgation.

As a result of public comment and continuing review and evaluation of the proposed regulation by EPA, the following changes have been made in the regulation.

(1) As a result of some changes in the subcategorization (low and high cracking combined to form the new cracking subcategory and the topping subcategory being defined as those refineries without cracking) a reevaluation of the median flows within each subcategory was made. The changes made are as follows: topping from 12 gal/bbl to 20 gal/bbl; cracking from (low) 17 gal/bbl, (high) 21 gal/bbl to 25 gal/bbl; petrochemical from 25 gal/bbl to 30 gal/bbl; lube from 37 gal/bbl to 45 gal/bbl; and integrated from 45 gal/bbl to 48 gal/bbl. The parameter limits which are flow based were adjusted accordingly.

(2) The limits on storm water runoff from tankfields and non-process areas were changed from 15 mg/l of TOC and no sheen to 35 mg/l of TOC and 15 mg/l of oil and grease (both maximums). These limits are set at those same maximum concentrations expected if the runoff were passed through the treatment plant.

(3) A further subcategorization of the industry was made based on process configuration and size.

(4) Zinc was eliminated as a parameter to be limited industry wide. Further evaluation of the API/EPA Raw Waste Load Survey showed only a small percentage of the industry over the zinc limits set.

(5) The ammonia limits were changed based on the changes in the subcategorization.

(6) The ratio of TOC/BOD5 was changed from 1.8 to 2.2.

(7) Once-through cooling water was excluded from the production based allocation and a maximum concentration of 5 mg/l of TOC was set.

(8) The daily maximum values were increased to reflect a 99 percent probability of occurrence. This was done to limit the number of technical violations of the permit.

(9) Section 304(b)(1)(B) of the Act provides for "guidelines" to implement the uniform national standards of section 301(b)(1)(A). Thus Congress recognized that some flexibility was necessary in order to take into account the complexity of the industrial world with respect to the practicability of pollution control technology. In conformity with the Congressional intent and in recognition of the possible failure of these regulations to account for all factors bearing on the practicability of control technology, it was concluded that some provision was needed to authorize flexibility in the strict application of the limitations contained in the regulation where required by special circumstances applicable to individual dischargers. Accordingly, a provision allowing flexibility in the application of the limitations representing best practicable control technology currently available has been added to each subpart, to account for special circumstances that may not have been adequately accounted for when these regulations were developed.

(c) *Economic impact.* The changes that were made to the proposed regulations for the petroleum refining category do not substantially affect the initial economic analysis. The changes detailed above reflects a reevaluation of the efficiency of various treatment systems and further subcategorization of the industry to more equitably distribute the economic burden. These revisions, however, do not effect the conclusions of the economic impact study.

(d) *Cost-benefit analysis.* The detrimental effects of the constituents of waste waters now discharged by point sources within the Petroleum Refining point source category are discussed in Section VI of the report entitled "Development Document for Effluent Limitations Guidelines for the Petroleum Refining Point Source Category".

It is not feasible to quantify in economic terms, particularly on a national basis, the costs resulting from the discharge of these pollutants to our Nation's waterways. Nevertheless, as indicated in Section VI, the pollutants discharged have substantial and damaging impacts

on the quality of water and therefore on its capacity to support healthy populations of wildlife, fish and other aquatic wildlife and on its suitability for industrial, recreational and drinking water supply uses.

The total cost of implementing the effluent limitations guidelines includes the direct capital and operating costs of the pollution control technology employed to achieve compliance and the indirect economic and environmental costs identified in Section VIII and in the supplementary report entitled "Economic Analysis of Proposed Effluent Guidelines Petroleum Refining Industry" (December 1973). Implementing the effluent limitations guidelines will substantially reduce the environmental harm which would otherwise be attributable to the continued discharge of polluted waste waters from existing and newly constructed plants in the petroleum refining industry. The Agency believes that the benefits of thus reducing the pollutants discharged justify the associated costs which, though substantial in absolute terms, represent a relatively small percentage of the total capital investment in the industry.

(e) *Solid waste control.* Solid waste control must be considered. The waterborne wastes from the petroleum refining industry may contain a considerable volume of metals in various forms as a part of the suspended solids pollutant. Best practicable control technology and best available control technology as they are known today require disposal of the pollutants removed from waste waters in this industry in the form of solid wastes and liquid concentrates. In some cases these are nonhazardous substances requiring only minimal custodial care. However, some constituents may be hazardous and may require special consideration. In order to ensure long term protection of the environment from these hazardous or harmful constituents, special consideration of disposal sites must be made. All landfill sites where such hazardous wastes are disposed should be selected so as to prevent horizontal and vertical migration of these contaminants to ground or surface waters. In cases where geologic conditions may not reasonably ensure this, adequate precautions (e.g., impervious liners) should be taken to ensure long term protection to the environment from hazardous materials. Where appropriate the location of solid hazardous materials disposal sites should be permanently recorded in the appropriate office of the legal jurisdiction in which the site is located.

(f) Publication of information on processes, procedures, or operating methods which results in the elimination or reduction of the discharge of pollutants.

In conformance with the requirements of section 304(c) of the Act, a manual entitled, "Development Document for Effluent Limitations Guidelines and New Source Performance Standards for the Petroleum Refining Point Source Category," is being published and will be available for purchase from the Government Printing Office, Washington, D.C. 20401 for a nominal fee.

(g) *Final rulemaking.* In consideration of the foregoing, 40 CFR Ch. I, Subchapter N is hereby amended by adding a new Part 419, Petroleum Refining Point Source Category, to read as set forth below. An order of the Federal District Court for the District of Columbia entered in "NRDC v. Train" (Civ. No. 1609–73) on November 26, 1973, required that the Administrator sign final effluent limitations guidelines for this industry category by March 15, 1974. That order was subsequently modified on March 15, 1974, and the date for signing extended until April 15, 1974. On the same date the District Court ordered that the effective date for effluent limitations guidelines established by its November 26 order remain applicable and not be affected by the extension in the publication date. The effective date for effluent limitations guidelines for this industry established by the Court's November 26 order is May 12, 1974. Accordingly, good cause is found for the final regulation promulgated as set forth below to be effective on May 12, 1974.

Dated: April 30, 1974.

JOHN QUARLES,
Acting Administrator.

§ 419.12 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.

In establishing the limitations set forth in this section, EPA took into account all information it was able to collect, develop and solicit with respect to factors (such as age and size of plant, raw materials, manufacturing processes, products produced, treatment technology available, energy requirements and costs) which can affect the industry subcategorization and effluent levels established. It is, however, possible that data which would affect these limitations have not been available and, as a result these limitations should be adjusted for certain plants in this industry. An individual discharger or other interested person may submit evidence to the Regional Administrator (or to the State, if the State has the authority to issue NPDES permits) that factors relating to the equipment or facilities involved, the process applied, or other such factors related to such discharger are fundamentally different from the factors considered in the establishment of the guidelines. On the basis of such evidence or other available information, the Regional Administrator (or the State) will make a written finding that such factors are or are not fundamentally different for that facility compared to those specified in the Development Document. If such fundamentally different factors are found to exist, the Regional Administrator or the State shall establish for the discharger effluent limitations in the NPDES permit either more or less stringent than the limitations established herein, to the extent dictated by such fundamentally different factors. Such limitations must be approved by the Administrator of the Environmental Protection Agency. The Administrator may approve or disapprove such limitations, specify other limitations, or initiate proceedings to revise these regulations.

(a) The following limitations establish the quantity or quality of pollutants or pollutant properties, controlled by this paragraph, which may be discharged by a point source subject to the provisions of this subpart after application of the best practicable control technology currently available:

§ 419.32 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.

In establishing the limitations set forth in this section, EPA took into account all information it was able to collect, develop and solicit with respect to factors (such as age and size of plant, raw materials, manufacturing processes, products produced, treatment technology available, energy requirements and costs) which can affect the industry subcategorization and effluent levels established. It is, however, possible that data which would affect these limitations have not been available and, as a result, these limitations should be adjusted for certain plants in this industry. An individual discharger or other interested person may submit evidence to the Regional Administrator (or to the State, if the State has the authority to issue NPDES permits) that factors relating to the equipment or facilities involved, the process applied, or other such factors related to such discharger are fundamentally different from the factors considered in the establishment of the guidelines. On the basis of such evidence or other available information, the Regional Administrator (or the State) will make a written finding that such factors are or are not fundamentally different for that facility compared to those specified in the Development Document. If such fundamentally different factors are found to exist, the Regional Administrator or the State shall establish for the discharger effluent limitations in the NPDES permit either more or less stringent than the limitations established herein, to the extent dictated by such fundamentally different factors. Such limitations must be approved by the Administrator of the Environmental Protection Agency. The Administrator may approve or disapprove such limitations, specify other limitations, or initiate proceedings to revise these regulations.

(a) The following limitations establish the quantity or quality of pollutants or pollutant properties, controlled by this paragraph, which may be discharged by a point source subject to the provisions of this subpart after application of the best practicable control technology currently available:

NOTES

See table § 419.42(b)(2) for process factor. Process factor = 0.88.
See table § 419.42(b)(1) for size factor for 125 1,000 bbl per stream day lube refinery. Size factor = 0.93.
To calculate the limits for each parameter, multiply the limit § 419.42(a) by both the process factor and size factor.
BOD5 limit (maximum for any 1 day) = 11.8 × 0.88 × 0.93 = 9.7 lb. per 1,000 bbl of feedstock.

the facility includes any process in addition to topping, cracking, lube oil manufacturing processes and petrochemical operations.

§ 419.51 **Specialized definitions.**

For the purpose of this subpart:

(a) Except as provided below, the general definitions, abbreviations and methods of analysis set forth in Part 401 of this chapter shall apply to this subpart.

(b) The term "runoff" shall mean the flow of storm water.

§ 419.52 **Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.**

In establishing the limitations set forth in this section, EPA took into account all information it was able to collect, develop and solicit with respect to factors (such as age and size of plant, raw materials, manufacturing processes, products produced, treatment technology available, energy requirements and costs) which can affect the industry subcategorization and effluent levels established. It is, however, possible that data which would affect these limitations have not been available and, as a result, these limitations should be adjusted for certain plants in this industry. An individual discharger or other interested person may submit evidence to the Regional Administrator (or to the State, if the State has the authority to issue NPDES permits) that factors relating to the equipment or facilities involved, the process applied, or other such factors related to such discharger are fundamentally different from the factors considered in the establishment of the guidelines. On the basis of such evidence or other available information, the Regional Administrator (or the State) will make a written finding that such factors are or are not fundamentally different for that facility compared to those specified in the Development Document. If such fundamentally different factors are found to exist, the Regional Administrator or the State shall establish for the discharger effluent limitations in the NPDES permit either more or less stringent than the limitations established herein, to the extent dictated by such fundamentally different factors. Such limitations must be approved by the Administrator of the Environmental Protection Agency. The Administrator may approve or disapprove such limitations, specify other limitations, or initiate proceedings to revise these regulations.

(a) The following limitations establish the quantity or quality of pollutants or pollutant properties, controlled by this paragraph, which may be discharged by a point source subject to the provisions of this subpart after application of the best practicable control technology currently available:

Effluent limitations for TOC shall be based on effluent data from the plant correlating TOC to BOD5.

If in the judgement of the Regional Administrator, adequate correlation data are not available, the effluent limitations for TOC shall be established at a ratio of 2.2 to 1 to the applicable effluent limitations on BOD5.

ENVIRONMENTAL PROTECTION AGENCY

[40 CFR Part 419]

PETROLEUM REFINING POINT SOURCE CATEGORY

Proposed Application of Effluent Limitations Guidelines for Existing Sources to Pretreatment Standards for Incompatible Pollutants

Notice is hereby given pursuant to sections 301, 304 and 307(b) of the Federal Water Pollution Control Act, as amended (the Act); 33 U.S.C. 1251, 1311, 1314 and 1317(b); 86 Stat. 816 et seq.; Pub. L. 92-500, that the proposed regulation set forth below concerns the application of effluent limitations guidelines for existing sources to pretreatment standards for incompatible pollutants. The proposal will amend 40 CFR Part 419—Petroleum Refining Point Source Category, establishing for each subcategory therein the extent of application of effluent limitations guidelines to existing sources which discharge to publicly owned treatment works. The regulation is intended to be complementary to the general regulation for pretreatment standards set forth at 40 CFR Part 128. The general regulation was proposed July 19, 1973 (38 FR 19236), and published in final form on November 8, 1973 (38 FR 30982).

The proposed regulation is also intended to supplement a final regulation being simultaneously promulgated by the Environmental Protection Agency (EPA or Agency) which provides effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources within the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory, and integrated subcategory of the petroleum refining point source category. The latter regulation applies to the portion of a discharge which is directed to the navigable waters. The regulation proposed below applies to users of publicly owned treatment works which fall within the description of the point source category to which the guidelines and standards (40 CFR Part 419) promulgated simultaneously apply. However, the proposed regulation applies to the introduction of incompatible pollutants which are directed into a publicly owned treatment works, rather than to discharges of pollutants to navigable waters.

The general pretreatment standard divides pollutants discharged by users of publicly owned treatment works into two broad categories: "compatible" and "incompatible." Compatible pollutants are generally not subject to pretreatment standards. (See 40 CFR 128.110 (State or local law) and 40 CFR 128.131 (Prohibited wastes) for requirements which may be applicable to compatible pollutants.) Incompatible pollutants are subject to pretreatment standards as provided in 40 CFR 128.133, which provides as follows:

In addition to the prohibitions set forth in § 128.131, the pretreatment standard for incompatible pollutants introduced into a publicly owned treatment works by a major contributing industry not subject to section 307(c) of the Act shall be, for sources within the corresponding industrial or commercial category, that established by promulgated effluent limitations guidelines defining best practicable control technology currently available pursuant to sections 301(b) and 304(b) of the Act; *Provided*, That, if the publicly owned treatment works which receives the pollutants is committed, in its NPDES permit, to remove a specified percentage of any incompatible pollutant, the pretreatment standard applicable to users of such treatment works shall be correspondingly reduced for that pollutant; *And provided further*, That "when the effluent limitations guidelines for each industry is promulgated, a separate provision will be proposed concerning the application of such guidelines to pretreatment.

The regulation proposed below is intended to implement that portion of § 128.133, above, requiring that a separate provision be made staging the application to pretreatment standards of effluent limitations guidelines based upon best practicable control technology currently available.

Questions were raised during the public comment period on the proposed general pretreatment standard (40 CFR Part 128) about the propriety of applying a standard based upon best practicable control technology currently available to all plants subject to pretreatment standards. In general, EPA believes the analysis supporting the effluent limitations guidelines is adequate to make a determination regarding the application of those standards to users of publicly owned treatment works. However, to ensure that those standards are appropriate in all cases, EPA now seeks additional comments focusing upon the application of effluent limitations guidelines to users of publicly owned treatment works.

Sections 419.15, 419.25, 419.35, 419.45, and 419.55 of the proposed regulation for point sources within the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory, and integrated subcategory (December 14, 1973; 38 FR 34542), contained the proposed pretreatment standard for new sources. The regulation promulgated simultaneously herewith contains §§ 419.16, 419.26, 419.36, 419.46 and 419.56 which state the applicability of standards of performance for purposes of pretreatment standard for new sources.

A preliminary Development Document was made available to the public at approximately the time of publication of the notice of proposed rulemaking and the final Development Document entitled "Development Document for Effluent Limitations Guidelines and New Source Performance Standards for the Petroleum Refining Point Source Category" is now being published. The economic analysis report entitled "Economic Analysis of Proposed Effluent Guidelines, Petroleum Refining Industry," (September 1973) was made available at the time of proposal. Copies of the Development Document and economic analysis report will continue to be maintained for inspection and copying during the comment period at the EPA Information Center, Room 227, West Tower, Waterside Mall, 401 M Street, SW., Washington, D.C. Copies will also be available for inspection at EPA regional offices and at State water pollution control agency offices. Copies of the Development Document may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Copies of the economic analysis report will be available for purchase through the National Technical Information Service, Springfield, Virginia 22151.

On June 14, 1973, the Agency published procedures designed to insure that, when certain major standards, regulations, and guidelines are proposed, an explanation of their basis, purpose and environmental effects is made available to the public. (38 FR 15653). The procedures are applicable to major standards, regulations and guidelines which are proposed on or after December 31, 1973, and which either prescribed national standards of environmental quality or require national emission, effluent or performance standards or limitations.

The Agency determined to implement these procedures in order to insure that the public was provided with background information to assist it in commenting on the merits of a proposed action. In brief, the procedures call for the Agency to make public the information available to it delineating the major environmental effects of a proposed action, to discuss the pertinent nonenvironmental factors affecting the decision, and to explain the viable options available to it and the reasons for the option selected.

The procedures contemplate publication of this information in the FEDERAL REGISTER, where this is practicable. They provide, however, that where such publication is impracticable because of the length of these materials, the material may be made available in an alternate format.

The Development Document referred to above contains information available to the Agency concerning the major environmental effects of the regulation proposed below. The information includes: (1) The identification of pollutants present in waste waters resulting from the manufacture of petroleum products, the characteristics of these pollutants, and the degree of pollutant reduction obtainable through implementation of the proposed standard; and (2) the anticipated effects on other aspects of the environment (including air, subsurface waters, solid waste disposal and noise) of the treatment technologies available to meet the standard proposed.

The Development Document and the economic analysis report referred to above also contain information available to the Agency regarding the estimated cost and energy consumption implications of those treatment technologies and the potential effects of those costs on the price and production of petroleum products. The two reports exceed, in the aggregate, 100 pages in length and contain a substantial number of charts, diagrams and tables. It is clearly impracticable to publish the material contained in these documents in the FEDERAL REGISTER. To the extent possible, significant aspects of the material have been presented in summary form in the preamble to the proposed regulation containing effluent limitations guidelines, new source performance standards and pretreatment standards for new sources within the petroleum refining category. (38 FR 34542; December 14, 1973). Additional discussion is contained in the analysis of public comments on the proposed regulation and the Agency's response to those comments. This discussion appears in the preamble to the promulgated regulation (40 CFR Part 419) which currently is being published as Part II in this issue of the FEDERAL REGISTER.

The options available to the Agency in establishing the level of pollutant reduction obtainable through the best practicable control technology currently available, and the reasons for the particular level of reduction selected are discussed in the documents described above. In applying the effluent limitations guidelines to pretreatment standards for the introduction of incompatible pollutants into municipal systems by existing sources in the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory and integrated subcategory, the Agency has, essentially, three options. The first is to declare that the guidelines do not apply. The second is to apply the guidelines unchanged. The third is to modify the guidelines to reflect: (1) Differences between direct dischargers and plants utilizing municipal systems which affect the practicability of the latter employing the technology available to achieve the effluent limitations guidelines; or (2) characteristics of the relevant pollutants which require higher levels of reduction (or permit less stringent levels) in order to insure that the pollutants do not interfere with the treatment works or pass through them untreated.

As described in the Development Document, the process wastes from the topping subcategory, cracking subcategory, petrochemical subcategory, lube subcategory and integrated subcategory have process wastes that are high in COD, TOC, oil and grease, ammonia, sulfide, phenolic compounds, total chromium and hexavalent chromium. These parameters are treatable to various levels using modes of treatment (biological treatment plus mixed media filters, sour water strippers, etc.) which are more extensive than those comparable to a publicly owned treatment works. These parameters are therefore considered incompatible.

Interested persons may participate in this rulemaking by submitting written comments in triplicate to the EPA Information Center, Environmental Protection Agency, Washington, D.C. 20460, Attention: Mr. Philip B. Wisman. Comments on all aspects of the proposed regulations are solicited. In the event comments are in the nature of criticisms as to the adequacy of data which is available, or which may be relied upon by the Agency, comments should identify and, if possible, provide any additional data which may be available and should indicate why such data is essential to the development of the regulations. In the event comments address the approach taken by the Agency in establishing pretreatment standards for existing sources, EPA solicits suggestions as to what alternative approach should be taken and why and how this alternative better satisfies the detailed requirements of sections 301, 304 and 307(b) of the Act.

A copy of all public comments will be available for inspection and copying at the EPA Information Center, Room 227, West Tower, Waterside Mall, 401 M Street SW., Washington, D.C. 20460. The EPA information regulation, 40 CFR Part 2, provides that a reasonable fee may be charged for copying.

In consideration of the foregoing, it is hereby proposed that 40 CFR Part 419 be amended to add §§ 419.14, 419.24, 419.34, 419.44, and 419.54 as set forth below. All comments received on or before June 10, 1974, will be considered.

Dated: April 30, 1974.

JOHN QUARLES,
Acting Administrator.

Title 40—Protection of the Environment

CHAPTER I—ENVIRONMENTAL PROTECTION AGENCY

SUBCHAPTER N—EFFLUENT GUIDELINES AND STANDARDS

PART 431—BUILDERS PAPER AND ROOFING FELT SEGMENT OF THE BUILDERS PAPER AND BOARD MILLS POINT SOURCE CATEGORY

Subpart A—Builders Paper and Roofing Felt

On January 14, 1974 notice was published in the FEDERAL REGISTER (39 FR 1818) that the Environmental Protection Agency (EPA or Agency) was proposing effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources within the builders paper and roofing felt subcategory of the builders paper and board mills category of point sources.

The purpose of this notice is to establish final effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources in the builders paper and board mills category of point sources, by amending 40 CFR Chapter I, Subchapter N, to add a new Part 431. This final rulemaking is promulgated pursuant to sections 301, 304 (b) and (c), 306 (b) and (c) and 307(c) of the Federal Water Pollution Control Act, as amended, (the Act); 33 U.S.C. 1251, 1311, 1314 (b) and (c), 1316 (b) and (c) and 1317(c); 86 Stat. 816 et seq.; Pub. L. 92-500. Regulations regarding cooling water intake structures for all categories of point sources under section 316(b) of the Act will be promulgated in 40 CFR Part 402.

In addition, the EPA is simultaneously proposing a separate provision which appears in the proposed rules section of the FEDERAL REGISTER, stating the application of the limitations and standards set forth below to users of publicly owned treatment works which are subject to pretreatment standards under section 307(b) of the Act. The basis of that proposed regulation is set forth in the associated notice of proposed rulemaking.

The legal basis, methodology and factual conclusions which support promulgation of this regulation were set forth in substantial detail in the notice of public review procedures published August 6, 1973 (38 FR 21202) and in the notice of proposed rulemaking for the builders paper and roofing felt subcategory. In addition, the regulations as proposed were supported by two other documents: (1) The document entitled "Development Document for Proposed Effluent Limitations Guidelines and New Source Performance Standards for the Builders Paper and Roofing Segment of the Builders Paper and Board Mills Point Source Category" (January 1974) and (2) the document entitled "Economic Analysis of Proposed Effluent Guidelines, Pulp, Paper, and Paperboard Industry" (Selected Segments) (September 1973). Both of these documents were made available to the public and circulated to interested persons at approximately the time of publication of the notice of proposed rulemaking.

Interested persons were invited to participtate in the rulemaking by submitting written comments within 30 days from the date of publication. Prior public participation in the form of solicited comments and responses from the States, Federal agencies, and other interested parties were described in the preamble to the proposed regulation. The EPA has considered carefully all of the comments received and a discussion of these comments with the Agency's response thereto follows.

(a) *Summary of comments.* The following responded to the request for written comments contained in the preamble to the proposed regulations: The Brown Company, State of Colorado (Department of Public Health), National Council of the Paper Industry for Air and Stream Improvement, Inc., United States Department of the Interior, United States Department of Commerce.

Each of the comments was reviewed and analyzed carefully. The following is a summary of the significant comments and the Agency's response to those comments.

(1) One commenter suggested that a settleable solids limitation should be included in the guidelines. It was suggested that while mills with extensive water reuse may be able to meet the guidelines without external treatment, a settleable solids limitation is needed in order that the mills do not discharge their unsettled "bleed-off" waste water containing a heavy load of settleable solids without some form of primary treatment.

The Agency agrees with this comment, as mills with extensive water reuse and without any external treatment may be able to meet the proposed guidelines while still causing a sludge bed problem. To alleviate the potential for sludge bed buildup in receiving waters, a settleable solids limitation equivalent to primary treatment has been incorporated into the final regulations. The costs of the primary treatment necessary for these mills was initially incorporated in the economic impact analysis and thus, the addition of a settleable solids limitation does not affect the conclusions of the economic impact analysis.

(2) The comment was made that the potential for the elimination of wastewater discharge should be stressed as an alternative to external treatment. Also, suggestions for additions to the development document were submitted.

For this industry, a possible alternative to external treatment is extensive water reuse and there is a potential for the elimination of discharge. However, the technologies for the elimination of discharges are still in the development stage and such technologies cannot yet be considered to be available.

The suggestions for stressing extensive water reuse as a possible alternative to external treatment were incorporated into the development document.

(3) The concept of temperature variance was endorsed by several commenters. However, it was suggested that the variance should not be a one-step allowance at 25° F but should be progressive below 60° F to reflect the temperature effects on biological activity in treatment systems. Several methods of implementation were suggested.

The Agency believes that mills operating in Northern climates should design their treatment facilities to account for the effects of extremely cold temperatures upon effluent quality. In addition, other factors, such as raw waste load, appear to affect the final effluent quality as much as extremely cold temperatures. Therefore, the temperature variance was removed from the regulations, and the regulations were revised based upon the exemplary mills' maximum pollutant discharge period with emphasis placed upon exemplary mills operating in Northern climates. Thus, the revised regulations reflect the effects of temperature and other factors upon the final effluent quality.

(4) One commenter stated that it should be made clear in the development document that the technology of mixed-media filtration is in the development stages and not applicable to this category of discharges.

The Agency believes that the technology of mixed-media filtration has been successfully demonstrated in other industry categories and in the treatment of municipal wastes. The technology is judged to be transferrable to the builders paper and board industry category as the waste characteristics to which mixed-media filtration has been successfully applied are similar to those in builders paper and roofing felt mill effluents.

(5) One comment was made that the construction schedules for treatment systems as presented in the proposed development document do not consider many factors, such as review and negotiation, increasing delay in equipment delivery and the effects of climate upon construction.

The original intent of the inclusion of construction schedules was not to establish specific rules for construction but to present a basic example of what can be done and the amount of time that might be involved. The several factors mentioned were considered but it is recognized that factors such as increasingly slow equipment deliveries are difficult to predict. However, it is emphasized that the construction schedules are only guides and are considered valid for that purpose.

(6) One commenter anticipated that the mills cited as exemplary might be out of compliance with the proposed regulations a substantial percentage of the time.

This comment relates to the statistical approach which was used to determine the proposed guidelines. However, the guidelines were revised to reflect the removal of the temperature variance and the effect of other factors such as raw waste upon final effluent quality. The revised guidelines were based on the maximum operating period of the exemplary mills which should insure that exemplary mills will meet the guidelines.

(7) The comment was made that the data base was insufficient to support the BPCTCA guidelines. Suggestions were submitted that provided a basis for a more accurate evaluation of available data.

The data base was derived from an extensive search for information and data as discussed in the Development Document. The Agency believes that the resulting data base is sufficient to support the guidelines. Data is nonexistent for many mills; however, the in-plant manufacturing processes are very similar between all mills in the builders paper and roofing felt segment, and the Agency feels that the available data adequately represents the industry.

(8) The comment was made that the selection of exemplary mills should be based upon external controls rather than internal controls.

It is the opinion of the Agency that the Act does not preclude considering some in-plant control changes as part of BPCTCA. Section 304(b)(1)(B) includes consideration of "the process employed" and "process changes" as part of the determination of BPCTCA. Where an in-plant change can be implemented by 1977 and meets the other requirements of section 304(b)(1), there is no reason to differentiate such control measure from any other control measure or practice imposed as part of BPCTCA. The in-plant changes which have been identified as available in 1977 are practices which are in common use in the industry.

(9) One commenter indicated that the economic impact to certain portions of the industry will be higher than indicated in the economic analysis. Specifically, the commenter objected to the conclusion that the guidelines would have no impact on the 25 percent of the builders paper and roofing felt industry which, while not now using municipal wastewater disposal systems, have access to them. The commenter stated that the mills will be required to pay user fees for access into the municipal systems, thereby having an economic impact.

The intent of indicating no economic impact upon those mills with access to municipal treatment was that the mills would not be impacted to the point of closure. The additional costs for these mills were initially incorporated into the economic impact analysis with regard to potential price effects.

(b) *Revision of the proposed regulation prior to promulgation.* As a result of public comments and continuing review and evaluation of the proposed regulations by the EPA, the following changes have been made in the regulation.

(1) A limitation on settleable solids equivalent to primary treatment was added to the regulations to prevent mills with extensive water reuse and no external treatment from discharging their unsettled bleed-off waste water without any treatment.

(2) The temperature variance was removed and the guidelines were revised to reflect the effects of temperature and other factors upon final effluent quality.

(3) Section 304(b)(1)(B) of the Act provides for "guidelines" to implement the uniform national standards of section 301(b)(1)(A). Thus Congress recognized that some flexibility was necessary in order to take into account the complexity of the industrial world with respect to the practicablity of pollution control technology. In conformity with the Congressional intent and in recognition of the possible failure of these regulations to account for all factors bearing on the practicability of control technology, it was concluded that some provision was needed to authorize flexibility in the strict application of the limitations contained in the regulation where required by special circumstances applicable to individual dischargers. Accordingly, a provision allowing flexibility in the application of the limitations representing best practicable control technology currently available has been added to each subpart, to account for special circumstances that may not have been adequately accounted for when these regulations were developed.

(c) *Economic impact.* The changes that were made to the proposed regulations do not substantially affect the costs associated with treatment, and therefore do not alter the conclusions of the initial economic analysis. However, the economic impact has been revised to reflect the additional information received. As a result, a total of 3–4 small mills may be expected to close in the event of a recessionary period rather than the initial estimate which included an additional six mills, previously assessed to have a moderate probability of closure. The potential price increase has been presented as a range due to the cyclic nature of demand, and the resulting varying ability of the industry to pass on the cost of pollution control.

(d) *Cost-benefit analysis.* The detrimental effects of the constituents of waste waters now discharged by point sources within the builders paper and roofing felt segment of the builders paper and board mills manufacturing point source category are discussed in Section VI of the report entitled "Development Document for Effluent Limitations Guidelines for the Builders Paper and Roofing Felt Manufacturing Segment of the Builders Paper and Board Mills Point Source Category" (May 1974). It is not feasible to quantify in economic terms, particularly on a national basis, the costs resulting from the discharge of these pollutants to our Nation's waterways. Nevertheless, as indicated in section VI, the pollutants discharged have substantial and damaging impacts on the quality of water and therefore on its capacity to support healthy populations of wildlife, fish and other aquatic wildlife and on its suitability for industrial, recreational and drinking water supply uses.

The total cost of implementing the effluent limitations guidelines includes the direct capital and operating costs of the pollution control technology employed to achieve compliance and the indirect economic and environmental costs identified in Section VIII and in the supplementary report entitled "Economic Analysis of Proposed Effluent Guidelines Pulp, Paper and Paperboard Industry" (September 1973). Implementing the effluent limitations guidelines will substantially reduce the environmental harm which would otherwise be attributable to the continued discharge of polluted waste waters from existing and newly constructed plants in the pulp, paper, and paperboard industry. The Agency believes that the benefits of thus reducing the pollutants discharged justify the associated costs which, though substantial in absolute terms, represent a relatively small percentage of the total capital investment in the industry.

(e) *Solid waste control.* Solid waste control must be considered. The waterborne wastes from the builders paper and roofing felt industry may contain a considerable volume of metals in various forms as a part of the suspended solids pollutant. Best practicable control technology and best available control technology as they are known today, require disposal of the pollutants removed from waste waters in this industry in the form of solid wastes and liquid concentrates. In some cases these are nonhazardous substances requiring only minimal custodial care. However, some constituents may be hazardous and may require special consideration. In order to ensure long term protection of the environment from these hazardous or harmful constituents, special consideration of disposal sites must be made. All landfill sites where such hazardous wastes are disposed should be selected so as to prevent horizontal and vertical migration of these contaminants to ground or surface waters. In cases where geologic conditions may not reasonably ensure this, adequate precautions (e.g., impervious liners) should be taken to ensure long term protection to the environment from hazardous materials. Where appropriate, the location of solid hazardous materials disposal sites should be permanently recorded in the appropriate office of the legal jurisdiction in which the site is located.

(f) *Publication of information on processes, procedures, or operating methods which result in the elimination or reduction of the discharge of pollutants.* In conformance with the requirements of section 304(c) of the Act, a manual entitled, "Development Document for Effluent Limitations Guidelines and New Source Performance Standards for the Builders Paper and Roofing Felt Manufacturing Segment of the Builders Paper and Board Mills Point Source Category," has been published and is available for purchase from the Government Printing Office, Washington, D.C. 20402 for a nominal fee.

(g) *Final rulemaking.* In consideration of the foregoing, 40 CFR Chapter I, Subchapter N is hereby amended by adding

V 39 I 91 MAY 9 74 XUM

a new Part 431, Builders Paper and Roofing Felt Segment of the Builders Paper and Board Mills Point Source Category, to read as set forth below. An order of the Federal District Court for the District of Columbia entered in "NRDC v. Train" (Civ. No. 1609–73) on November 27, 1973, required that the Administrator sign final effluent limitations guidelines for this industry category by March 29, 1974. That order was subsequently modified on March 14, 1974, and the date for signing extended until May 13, 1974. Thereafter, on March 15, 1974, the District Court ordered that the effective date for effluent limitations guidelines established by its November 27 order remain applicable and not be affected by the extension in the publication date. The effective date for effluent limitations guidelines for this industry established by the Court's November 27 order is May 13, 1974. Accordingly, good cause is found for the final regulation promulgated as set forth below to be effective on May 9, 1974.

Dated: May 2, 1974.

JOHN QUARLES,
Acting Administrator.

AUTHORITY: Secs. 301, 304(b), 304(c), 306(b), 306(c) and 307(c) Federal Water Pollution Control Act as amended 33 U.S.C. 1251, 1311, 1314(b), 1314(c), 1316(b), 1316(c), 1317(c); 86 Stat. 816 et seq.; Pub. L. 92–500.

§ 431.10 Applicability; description of the builders paper and roofing felt subcategory.

The provisions of this subpart are applicable to discharges resulting from the manufacture of saturating paper, flooring paper, deadening paper, and all other papers known as building papers or roofing felts.

§ 431.11 Specialized definitions.

For the purpose of this subpart:

(a) Except as provided below, the general definitions, abbreviations and methods of analysis set forth in Part 401 of this chapter shall apply to this subpart.

(b) The term "settleable solids" shall mean the amount of settleable matter present in a sample as determined by the test as described in "Standard Methods for the Examination of Water and Waste Water," 13th Edition.

§ 431.12 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.

(a) In establishing the limitations set forth in this section, EPA took into account all information it was able to collect, develop and solicit with respect to factors (such as age and size of plant, raw materials, manufacturing processes, products produced, treatment technology available, energy requirements and costs) which can affect the industry subcategorization and effluent levels established. It is, however, possible that data which would affect these limitations have not been available and, as a result, these limitations should be adjusted for certain plants in this industry. An individual discharger or other interested person may submit evidence to the Regional Administrator (or to the State, if the State has the authority to issue NPDES permits) that factors relating to the equipment or facilities involved, the process applied, or other such factors related to such discharger are fundamentally different from the factors considered in the establishment of the guidelines. On the basis of such evidence or other available information, the Regional Administrator (or the State) will make a written finding that such factors are or are not fundamentally different for that facility compared to those specified in the Development Document. If such fundamentally different factors are found to exist, the Regional Administrator or the State shall establish for the discharger effluent limitations in the NPDES permit either more or less stringent than the limitations established herein, to the extent dictated by such fundamentally different factors. Such limitations must be approved by the Administrator of the Environmental Protection Agency. The Administrator may approve or disapprove such limitations, specify other limitations, or initiate proceedings to revise these regulations.

(b) The following limitations establish the quantity or quality of pollutants or pollutant properties, controlled by this section, which may be discharged by a point source subject to the provisions of this subpart after application of the best practicable control technology currently available:

Effluent characteristic	Effluent limitations: Maximum for any 1 day	Effluent limitations: Average of daily values for 30 consecutive days shall not exceed—

§ 431.14 [Reserved]

§ 431.15 Standards of performance for new sources.

The following standards of performance establish the quantity or quality of pollutants or pollutant properties, controlled by this section, which may be discharged by a new source subject to the provisions of this subpart:

Effluent characteristic	Effluent limitations: Maximum for any 1 day	Effluent limitations: Average of daily values for 30 consecutive days shall not exceed—

[40 CFR Part 431]

BUILDERS PAPER AND BOARD MILLS POINT SOURCE CATEGORY

Application of Effluent Limitations Guidelines for Existing Sources to Pretreatment Standards for Incompatible Pollutants

Notice is hereby given pursuant to sections 301, 304 and 307(b) of the Federal Water Pollution Control Act, as amended, (the Act) ; 33 U.S.C. 1251, 1311, 1314 and 1317(b) ; 86 Stat. 816 et seq.; Pub. L. 92–500, that the proposed regulation set forth below concerns the application of effluent limitations guidelines for existing sources to pretreatment standards for incompatible pollutants. The proposal will amend 40 CFR Part 431—Builders Paper and Board Mills Manufacturing Point Source Category, establishing for each subcategory therein the extent of application of effluent limitations guidelines to existing sources which discharge to publicly owned treatment works. The regulation is intended to be complementary to the general regulation for pretreatment standards set forth at 40 CFR Part 128. The general regulation was proposed July 19, 1973 (38 FR 19236), and published in final form on November 8, 1973 (38 FR 30982).

The proposed regulation is also intended to supplement a final regulation being simultaneously promulgated by the Environmental Protection Agency (EPA or Agency) which provides effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources within the builders paper and roofing felt subcategory of the builders paper and board mills point source category. The latter regulation applies to the portion of a discharge which is directed to the navigable waters. The regulation proposed below applies to users of publicly owned treatment works which fall within the description of the point source category to which the guidelines and standards (40 CFR Part 431) promulgated simultaneously apply. However, the proposed regulation applies to the introduction of incompatible pollutants which are directed into a publicly owned treatment works, rather than to discharges of pollutants to navigable waters.

The general pretreatment standard divides pollutants discharged by users of publicly owned treatment works into two broad categories: "compatible" and "incompatible." Compatible pollutants are generally not subject to pretreatment standards. (See 40 CFR 128.110 (State or local law) and 40 CFR 128.131 (Prohibited wastes) for requirements which may be applicable to compatible pollutants). Incompatible pollutants are subject to pretreatment standards as provided in 40 CFR 128.133, which provides as follows:

> In addition to the prohibitions set forth in § 128.131, the pretreatment standard for incompatible pollutants introduced into a publicly owned treatment works by a major contributing industry not subject to section 307(c) of the Act shall be, for sources within the corresponding industrial or commercial category, that established by promulgated effluent limitations guidelines defining best practicable control technology currently available pursuant to sections 301(b) and 304(b) of the Act; provided that, if the publicly owned treatment works which receives the pollutants is committed, in its NPDES permit, to remove a specified percentage of any incompatible pollutant, the pretreatment standard applicable to users of such treatment works shall be correspondingly reduced for that pollutant; and provided further that *when the effluent limitations guidelines for each industry is promulgated, a separate provision will be proposed concerning the application of such guidelines to pretreatments.* (Emphasis added).

The regulation proposed below is intended to implement that portion of § 128.133, above, requiring that a separate provision be made stating the application to pretreatment standards of effluent limitations guidelines based upon best practicable control technology currently available.

Questions were raised during the public comment period on the proposed general pretreatment standard (40 CFR Part 128) about the propriety of applying a standard based upon best practicable control technology currently available to all plants subject to pretreatment standards. In general, EPA believes the analysis supporting the effluent limitations guidelines is adequate to make a determination regarding the application of those standards to users of publicly owned treatment works. However, to ensure that those standards are appropriate in all cases, EPA now seeks additional comments focusing upon the application of effluent limitations guidelines to users of publicly owned treatment works.

Section 431.15 of the proposed regulation for point sources within the builders paper and roofing felt subcategory (January 1974; 39 FR 1818) contained the proposed pretreatment standard for new sources. The regulation promulgated simultaneously herewith contains § 431.16 which states the applicability of standards of performance for purposes of pretreatment standard for new sources.

A preliminary Development Document was made available to the public at approximately the time of publication of the notice of proposed rulemaking and the final development document entitled "Development Document for Effluent Limitations Guidelines and New Source Performance Standards for the Builders Paper and Roofing Felt Segment of the Builders Paper and Board Mills Point Source Category" is now being published. The economic analysis report entitled "Economic Analysis of Proposed Effluent Guidelines, Pulp, Paper, and Paperboard", (September 1973) was made available at the time of proposal. Copies of the final Development Document and economic analysis report will continue to be maintained for inspection and copying during the comment period at the EPA Information Center, Room 227, West Tower, Waterside Mall, 401 M Street, SW., Washington, D.C. Copies will also be available for inspection at EPA regional offices and at State water pollution control agency offices. Copies of the Development Document may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Copies of the economic analysis report will be available for purchase through the National Technical Information Service, Springfield, Virginia 22151.

On June 14, 1973, the Agency published procedures designed to insure that, when certain major standards, regulations, and guidelines are proposed, an explanation of their basis, purpose and environmental effects is made available to the public (38 FR 15653). The procedures are applicable to major standards, regulations and guidelines which are proposed on or after December 31, 1973, and which either prescribe national standards of environmntal quality or require national emission, effluent or performance standards or limitations.

The Agency determined to implement these procedures in order to insure that the public was provided with background information to assist it in commenting on the merits of a proposed action. In brief, the procedures call for the Agency to make public the information available to it delineating the major environmental effects of a proposed action, to discuss the pertinent nonenvironmental factors affecting the decision, and to explain the viable options available to it and the reasons for the option selected.

The procedures contemplate publication of this information in the FEDERAL REGISTER, where this is practicable. They provide, however, that where such publication is impracticable because of the length of this material, the material may be made available in an alternate format.

The development document referred to above contains information available to the Agency concerning the major environmental effects of the regulation proposed below. The information includes: (1) The identification of pollutants present in waste waters resulting from the manufacture of builders paper and roofing felts, the characteristics of these pollutants, and the degree of pollutant reduction obtainable through implementation of the proposed standard; and (2) the anticipated effects on other aspects of the environment (including air, subsurface waters, solid waste disposal and land use, and noise) of the treatment technologies available to meet the standard proposed.

The development document and the economic analysis report referred to above also contain information available to the Agency regarding the estimated cost and energy consumption implications of those treatment technologies and the potential effects of those costs on the price and production of builders paper and roofing felt. The two reports exceed, in the aggregate, 100 pages in length and contain a substantial number of charts, diagrams and tables. It is clearly impracticable to publish the material contained in these documents in the FEDERAL REGISTER. To the extent possible, significant aspects of the material have been presented in summary form in the preamble to the proposed regulation containing effluent limitations guidelines, new source performance standards and pretreatment standards for new sources within the builders paper and board mills category (39 FR 1818; January 14, 1974). Additional discussion is contained in the analysis of public comments on the proposed regulation and the Agency's response to those comments. This discussion appears in the preamble to the promulgated regulation (40 CFR Part 431) which currently is being published immediately preceding this document in the Rules and Regulations section of the FEDERAL REGISTER.

The options available to the Agency in establishing the level of pollutant reduction obtainable through the best practicable control technology currently available, and the reasons for the particular level of reduction selected are discussed in the documents described above. In applying the effluent limitations guidelines to pretreatment standards for the introduction of incompatible pollutants into municipal systems by existing sources in the builders paper and roofing felt subcategory, the Agency has, essentially, three options. The first is to declare that the guidelines do not apply. The second is to apply the guidelines unchanged. The third is to modify the guidelines to reflect: (1) Differences between direct dischargers and plants utilizing municipal systems which affect the practicability of the latter employing the technology available to achieve the effluent limitations guidelines; or (2) characteristics of the relevant pollutants which require higher levels of reduction (or permit less stringent levels) in order to insure that the pollutants do not interfere with the treatment works or pass through them untreated.

As described in the development document the waste water from the building paper and roofing felt subcategory are all similar in types of pollutant contents. The pollutants are organic materials and solids. These waste water pollutants are considered compatible to treatment in a municipal system, and the guidelines should not apply.

Interested persons may participate in this rulemaking by submitting written comments in triplicate to the EPA Information Center, Environmental Protection Agency, Washington, D.C. 20460, Attention: Mr. Philip B. Wisman. Comments on all aspects of the proposed regulations are solicited. In the event comments are in the nature of criticisms as to the adequacy of data which are available, or which may be relied upon by the Agency, comments should identify and, if possible, provide any additional data which may be available and should indicate why such data are essential to the development of the regulations. In the event comments address the approach taken by the Agency in establishing pretreatment standards for existing sources, EPA solicits suggestions as to what alternative approach should be taken and why and how this alternative better satisfies the detailed requirements of sections 301, 304 and 307(b) of the Act.

Upon sale, the seller shall record the quantity, type and caliber or gauge sold or transferred, the name and address of the purchaser and the number of the purchaser's identification card. United States citizens authorized to possess and use guns and ammunition pursuant to Section 8900.8 of this Chapter, may purchase ammunition for a gun upon presentation of his nonresident gun license or hunting license and, in such case, the seller may substitute full information identifying the nonresident gun license or hunting license for information concerning the identification card.

Any marshal, sheriff, deputy sheriff, policeman or other law enforcement officer who takes advantage of this exception to purchase a handgun for someone other than himself shall be guilty of a misdemeanor.

(2) The seven [7] day waiting period shall also be waived for any person to whom a qualified or unlimited handgun-carrying license has been issued, upon exhibition of the license to the transferor. The transferor shall note on the application-to-purchase form the serial number of the license, the expiration date, the issuing authority, and the notation "waiting period waived," together with the date on which the handgun or handguns are released to the applicant. Any person using or seeking to use a false, counterfeit, spurious or altered handgun-carrying license to obtain a handgun contrary to the provisions of this chapter shall be subject to the penalties provided in section 18 of this chapter.

(b) At the time of applying for the transfer of a handgun, the transferee shall complete and sign an application in triplicate in the presence of the transferor containing the following information: Date and hour of the transfer, name, full address, occupation, sex, color of eyes, color of hair, race, complexion, age, place of birth, date of birth, nationality, height, weight, build, scars and marks, and the make, model, caliber designation and manufacturer's serial number of the handgun or handguns transferred. This application, in triplicate, shall be deposited with the transferor who shall, within eight [8] hours of the time of execution of the application, sign and attach his address and forward by first class mail or deliver in person one [1] copy of the application to the chief of police of the municipality or the sheriff of the county of which the purchaser is a resident; one [1] copy duly signed by the transferor shall at the same time be forwarded by him with his address to the superintendent; and he, the transferor, shall retain one [1] copy for six [6] years. If the superintendent shall by administrative rule require, the application forms forwarded to the superintendent may be accompanied by a full or partial set of legible and classifiable fingerprints of the transferee, taken by the transferor or by an agent of the transferor. Repeated instances of the transferor intentionally forwarding illegible fingerprints shall, in the case of a dealer, constitute grounds for the suspension or revocation of the dealer's license. Upon receipt of the handgun transfer application forms, the chief of police or sheriff, and the superintendent shall search the records of their respective departments concerning the transferee, and they shall forward immediately in both verbal and written form to the transferor any information constituting grounds for nondelivery of the handgun or handguns. In the case of the occasional transfer of a handgun between individuals, both the transferor and the transferee shall complete the application and fingerprint forms at any sheriff's office, police station, state police post, or licensed dealer, with the required fingerprints to be taken by a qualified person and the forms being forwarded to the appropriate chief of police or sheriff and to the superintendent, by the person taking the fingerprints. No charge shall be made for this service by any police agency; however, a dealer may charge a fee not to exceed two dollars [$2.00] for his services in assisting in the processing of the transfer, which fee is to be assessed of the transferor. It is the intent of this chapter that all sale forms shall be completed by the transferee in the presence of the transferor and that delivery of the handgun or handguns not take place until the seven [7] day waiting period has elapsed or has been waived as indicated above. Any notice from the chief of police or sheriff or from the superintendent indicating that the information on the transferee's application is untrue or incomplete or that the transferee has been convicted of a violation of this chapter or any crime of violence shall be grounds for nondelivery of the handgun or handguns, and in such case, delivery shall not occur without written approval of the superintendent.

(c) Delivery of a handgun by the transferor or his agent to the transferee prior to the expiration of the seven [7] day waiting period, except when the waiting period has been waived under this section, or delivery to any transferee without the superintendent's written approval after receiving notice of grounds for nondelivery is a misdemeanor and in addition, constitutes grounds for the immediate suspension of the retail dealer's license.

(d) No additional record of any lawful transfer of any firearm shall be made or maintained by any local or state official or agency; and, all forms utilized in executing lawful firearm transfers, with the sole exception of those remaining with the transferor, shall be forwarded within six [6] months to the transferee indicated on the forms. Said forms shall then be retained by the transferee as proof of ownership of the firearm or firearms listed thereon.

10-4751h *Retail dealer—License required.*—A retail dealer shall not sell, trade, or otherwise transfer or expose for sale, trade, or transfer, or have in his possession with intent to sell, trade, or transfer, any handgun without being licensed under section 9 of this chapter.

In addition, the officer to whom the application is made shall search his records, conducting an investigation into the applicant's character and reputation. Based on the information contained in the application, which the officer shall verify for accuracy, and the results of the officer's investigation, the officer to whom the application is made shall forward this information in as many copies as the superintendent shall designate together with his recommendation for approval or disapproval, and one [1] set of legible and classifiable fingerprints of the applicant to the superintendent, who may make whatever further investigation he deems necessary. In addition, whenever disapproval is recommended, the officer to whom the application was made shall provide the superintendent and the applicant with his complete reasons for the disapproval in writing. If the officer to whom the application is made recommends approval, he shall instruct the applicant in the proper method of taking legible and classifiable fingerprints. If it appears to the superintendent that the applicant is of good character and reputation and a proper person to be so licensed, he shall issue to said applicant a retail handgun dealer's license which shall be valid for a period of two [2] years from the date of issue. The fee for said license shall be five dollars [$5.00], which shall be deposited with the officer to whom the application is made who shall in turn forward it to the superintendent for deposit with the treasurer of state when the application is approved by the superintendent. In the event that said application is disapproved by the superintendent, said fee shall be returned to the applicant, along with the complete reasons, in writing, for the disapproval. No retail dealer's license shall be issued to any person who has been convicted of a crime of violence in this state or any state or country, or who has been convicted of a felony violation of this chapter [§§ 10-4751a—10-4751r]. A retail dealer's license shall permit the licensee to sell handguns at retail within this state subject to the following conditions in addition to those specified elsewhere in this chapter for breach of any of which the license may be suspended or revoked in accordance with applicable law and in addition the licensee may be subject to punishment as provided in this chapter:

(a) The business shall be carried on only in the site designated in the license and a separate license shall be required for each separate retail outlet. In the event a licensed dealer moves his place of business, he shall promptly notify the superintendent, who shall at once issue an amended license certificate valid for the balance of the license period. This section shall not apply to sales at wholesale.

(b) The license, certified by the issuing authority, shall be displayed on the business premises in a prominent place where it can be seen easily by prospective customers.

(c) No handgun shall be sold in violation of any provisions of this chapter, nor shall any handgun be sold under any circumstances unless the purchaser is personally known to the seller or presents clear evidence of his identity.

10-4751j *Loan secured by handgun prohibited.*—No person shall make any loan secured by a mortgage, deposit, or pledge of a handgun.

10-4751k *Penalty for giving false information or evidence of identity—Confiscation and disposal of handgun.*—No person, in purchasing or otherwise securing delivery of a handgun or in applying for a license to carry a handgun, shall give false information or offer false evidence of identity. Upon notice of a violation of this section by the superintendent, it shall be the duty of the sheriff or chief of police or corresponding officer of the jurisdiction in which the purchaser resides, to confiscate the firearm and retain it as evidence pending trial for the offense.

10-4751l *Alteration, removal or obliteration of identifying marks prohibited.*—No person shall change, alter, remove or obliterate the name of the maker, model, manufacturer's serial number, or other mark of identification on any handgun, except as provided by applicable United States Statute.

The card holder shall notify, in writing, both the issuing authority and the commissioner of public safety of any change in his address. Such notification shall be made within ten days of its occurrence.

Upon receipt of an application for a card, the licensing authority shall forward a copy of such application to the commissioner of public safety, who shall within twenty-one days advise in writing of any disqualifying criminal record, if any, of the applicant and whether there is reason to believe that the applicant is disqualified for any of the foregoing reasons for possessing a card.
